WEEKLY RETURN

DEATHS LONDON BIRTHS AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANK, E.C.

Price 11d. WEEK ENDING SATURDAY, JANUARY 4. No. 1. 1896. Vol. LVII.]

> General Register Office, Somerset House, January 6th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in Thirry-three Great Towns of England and Wales corresponded to an annual rate of 20.7 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alpha. betically arranged, corresponded to the following annual rates per 1000:-

The second second		Weeks	ending				Weeks	ending	3

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:-from measles, 1.1 in London and in Liverpool, 1.8 in Oldham, 1.9 in Norwich, 2.4 in Birmingham, 2.5 in Burnley, 4.5 in Salford, and 4.8 in Blackburn; from scarlet fever, 1·1 in Gateshead; from whooping-cough, 1·0 in Derby, in Manchester, and in Leeds, 1·2 in Salford, 1·4 in Birkenhead, in Bradford, and in Sheffield, 1·5 in Sunderland, 1·7 in Bolton, and 2·5 in Oldham; from "fever," 2·4 in Wolverhampton; and from diarrhæa, 1·1 in Gateshead. The 99 deaths from diphtheria included 66 in London, 9 in Birmingham, and 3 in Halifax. No death from small-pox was registered in any of the thirty-three towns.

LONDON.

In LONDON 2735 BIRTHS and 1707 DEATHS were registered. Allowing for increase of population, the births were 220, and the deaths 523, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

per 1000 from all causes, which had been 17.5, 18.1, and 17.8 in the preceding three weeks, rose again last week to 20.1. During the four weeks ending on Saturday last the death-rate averaged 18.4 per 1000, being 5.4 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1707 deaths included 91 from measles, 28 from scarlet fever, 66 from

The 1707 deaths included 91 from measles, 28 from scarlet fever, 66 from diphtheria, 39 from whooping-cough, 14 from enteric fever, 14 from diarrhæa and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 252 deaths were referred to these

diseases, being 19 above the corrected average weekly number.

The deaths from measles, which had been 96, 126, and 97 in the preceding three weeks, further fell last week to 91, but were 22 above the corrected average; 13 cases belonged to Islington, 12 to Camberwell, 8 to St. Pancras, 8 to Lambeth, 7 to Hammersmith and 7 to Newington sanitary areas. The deaths from scarlet fever, which had been 19, 25, and 17 in the preceding three weeks, rose again last week to 28, exceeding the corrected average by 7. The deaths from diphtheria, which had been 63, 62, and 71 in the preceding three weeks, fell again last week to 66, but exceeded the corrected average by 30; 9 cases belonged to Fulham, 6 to Islington, 6 to Bethnal Green, 5 to Mile End Old Town, 4 to Hackney, 4 to Battersea, 4 to Camberwell, and 4 to Plumstead sanitary areas. The deaths from whooping-cough, which had been 24, 33, and 32 in the preceding three weeks, rose last week to 39, but were 40 below the corrected average; 4 cases belonged to Hammersmith and 4 to Shoreditch sanitary areas. The fatal cases of enteric fever, which had been 21, 11, and 23 in the preceding three weeks, fell again last week to 14, which is also the corrected average; 3 cases belonged to Camberwell and 2 to Islington sanitary areas. The deaths from diarrhæa, which had been 6, 20, and 15 in the preceding three weeks, were 14 last week, the corrected average being 13.

The deaths referred to diseases of the respiratory organs, which had been 264, 291, and 318 in the preceding three weeks, were 314 last week, the corrected

average being 738-

The deaths attributed directly to *influenza* numbered 5, having been 15, 15, and 8 in the preceding three weeks.

The death of a female, aged 11 years, was certified, after inquest, as due to

hydrophobia.

Different forms of violence caused 88 deaths, concerning all of which inquests were held. Of these 88 deaths, 6 were cases of suicide, while the remaining 82 were attributed to accident or negligence. Six of these were referred to vehicles in the streets, 2 to a conflagration, 6 to drowning, and 23 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 68 cases of small-pox, 2830 of scarlet fever, 683 of diphtheria, and 113 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 9 cases, against 18, 5, and 12; of scarlet fever, 320 cases, against 329, 210, and 184; of diphtheria, 98 cases, against 91, 104, and 93; and of enteric fever, 14 cases, against 24, 13, and 10.

GREATER LONDON.

In Greater London 3725 births and 2162 deaths were registered, corresponding to annual rates of 31.6 and 18.3 per 1000 of the estimated population. In the Outer Ring 11 deaths from measles, 8 from scarlet fever, 14 from diphtheria, and 7 from "fever" were registered. Three deaths from measles, 3 from diphtheria, and 3 from "fever" occurred in West Ham district; 3 deaths from measles and 5 from diphtheria belonged to Edmonton district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.90 inches, and that of the Thermometer 45°.8, the latter being 7°.3 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 25 per cent, below the week's average in the 16 years 1860-75. No sunshine was registered during the week'; the measured rainfall amounted to 0.36 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Faver respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

No. 2. 1896. Vol. LVII.] WEEK ENDING SATURDAY, JANUARY 11. [Price 11/4].

General Register Office, Somerset House, January 13th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in Thirty-three Great Towns of England and Wales corresponded to an annual rate of 18.5 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

		Weeks	ending		Weeks ending

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1·0 in London, 1·2 in Manchester and in Leeds, 1·5 in Oldham, 1·7 in Liverpool, 2·0 in Blackburn, 2·4 in Norwich, 2·7 in Birmingham, 3·0 in Burnley, and 4·0 in Salford; from scarlet fever, 1·1 in Gateshead; from whooping-cough, 1·0 in Norwich and in Birkenhead, 1·2 in Sheffield and in Newcastle-on-Tyne, 1·3 in Bolton and in Leeds, and 1·5 in Derby; from "fever," 1·0 in Burnley and 1·3 in Bolton; and from diarrhæa, 1·8 in Wolverhampton. The 73 deaths from diphtheria included 48 in London, 6 in Birmingham, and 3 in West Ham. Three deaths from small-pox were registered belonging to London, and 3 to West Ham, but not one belonging to any other of the thirty-three towns.

A 90274.—2. 650.—1/96. Wt. 259.

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

LONDON.

In LONDON* 2454 BIRTHS and 1540 DEATHS were registered. Allowing for increase of population, the births were 428, and the deaths 876, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 18.1, 17.8, and 20.1 in the preceding three weeks, fell again last week to 18.1. During the four weeks ending on Saturday last the death-rate averaged 18.5 per 1000, being 6.9 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1540 deaths included 3 from small-pox, 89 from measles, 22 from scarlet fever, 48 from diphtheria, 40 from whooping-cough, 13 from enteric fever, 1 from an ill-defined form of continued fever, 6 from diarrhoea and dysentery, and not one death from typhus or from cholera; thus, 222 deaths were referred to these

diseases, being 14 below the corrected average weekly number.

The 3 fatal cases of small-pox belonged to Shoreditch, Lambeth, and Greenwich sanitary areas respectively. The deaths from measles, which had been 126, 97, and 91 in the preceding three weeks, were 89 last week, exceeding the corrected average by 22; 14 cases belonged to Camberwell, 12 to Islington, 11 to Lambeth, 7 to St. Pancras, and 5 to Fulham sanitary areas. The deaths from scarlet fever, which had been 25, 17, and 28 in the preceding three weeks, fell again last week to 22, the corrected average being 20; 3 cases belonged to Bethnal Green sanitary The deaths from diphtheria, which had been 62, 71, and 66 in the preceding three weeks, further fell last week to 48, but exceeded the corrected average by 16; 6 cases belonged to Islington, 4 to St. Marylebone, 4 to Battersea, 4 to Greenwich, 3 to Paddington, and 3 to St. Luke sanitary areas. The deaths from whoopingcough, which had been 33, 32, and 39 in the preceding three weeks, were 40 last week, the corrected average being 87; 8 cases belonged to Camberwell sanitary The fatal cases of enteric fever, which had been 11, 23, and 14 in the preceding three weeks, were 13 last week, and were equal to the corrected average; 3 cases belonged to Bethnal Green sanitary area. The deaths from diarrhea, which had been 20, 15, and 14 in the preceding three weeks, further fell last week to 6, and were 8 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 291, 318, and 314 in the preceding three weeks, rose last week to 320, but were less than two-fifths of the corrected average.

The deaths attributed directly to influenza numbered 13, having been 15, 8, and

5 in the preceding three weeks.

Different forms of violence caused 76 deaths, concerning all of which inquests Of these 76 deaths, 7 were cases of suicide, and one of homicide, while the remaining 68 were attributed to accident or negligence. Six of these were referred to vehicles in the streets, 5 to drowning, and 11 (including 10 of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.†

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 66 cases of small-pox, 2839 of scarlet fever, 658 of diphtheria, and 113 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 20 cases, against 5, 12, and 9; of scarlet fever, 290 cases, against 210, 184, and 320; of diphtheria, 96 cases, against 104, 93, and 98; and of enteric fever, 15 cases, against 13, 10, and 14.

^{*} Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

† The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

Deaths belonging to the several Sanitary Areas of Registration London registered in the 13 weeks ending on 28th December, 1895.

In the above Table all deaths of persons in, or on the way to, Hospitals and other Public Institutions, as well as those of persons under treatment in surgical homes, or dying by accident or otherwise in the streets, have been distributed, as far as practicable, to the samtary areas in which the deceased had previously resided. The deaths of 379 London residents who died outside Registration London in the Strand Union Workhouse at Edmonton, the Holborn Union Workhouse at Mitcham, the City of London Lunatic Asylum at Stone, and the Metropolitan Hospitals and Asylums have been similarly distributed. In 420 cases the previous residence was outside Registration London, and these bave been excluded from the Table.

GREATER LONDON.

In Greater London 3411 births and 1965 deaths were registered, corresponding to annual rates of 28·9 and 16·7 per 1000 of the estimated population. In the Outer Ring 3 deaths from small-pox, 7 from measles, 5 from scarlet fever, 12 from diphtheria, 10 from whooping-cough, 8 from "fever", and 7 from diarrhoa were registered. The 3 cases of small-pox, 4 of diphtheria, and 3 of "fever" belonged to West Ham district; 4 cases of measles, 5 of diphtheria, and 3 of "fever" belonged to Edmonton district; 4 deaths from whooping-cough occurred in Acton sub-district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30.52 inches, and that of the Thermometer 37°·2, the latter being 0°·9 below the week's average in the 50 years 1841-90. The direction of the wind was Easterly, the horizontal movement of the air being 20 per cent, below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 1.2 hours; the measured rainfall amounted to 0.06 of an inch.

RETURNS OF LONDON WATER COMPANIES.

The LONDON WATER COMPANIES have been good enough to furnish the following account of the number of services and the average daily amount of water supplied during the month of December. The supply was in the ratio of 236 gallons to one service.

Note.—The Return for December 1895, as compared with that for the corresponding month of 1894, shows an increase of 12,404 services and an increase of 10,252,322 gallons of water supplied daily.

Analysis of Metropolitan Water Supply during December, 1895.

Water-analysis Laboratory, The Yews, Reigate, 9th January, 1896.

SIR, I HAVE to report to you the results of the chemical analysis, and of the physical and bacterioscopic examination, of the waters supplied to the inner, and portions of the outer, circle

of the Metropolis during the month of December 1895.

At the request of the Associated Metropolitan Water Companies, I have extended these monthly examinations to (a) the chemical and bacterioscopic condition of the raw river water at the intakes of the various Companies, and (b) to the bacteriology of the water as it issues from the filter beds of each Company, and before it is pumped into the distributing mains.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham

and Dr. Mills of Glasgow.

Taking the average amount of organic impurity in a given volume of the Kent Company's water during the nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:-Kent 0.7, Tottenham 1.3, East London (deepwell) 2.3, Colne Valley 2.7, New River, 3.2, Grand Junction 3.8, East London (river supply) 4.4, Southwark 4.5, Lambeth 4.6, Chelsea 5.0, and West Middlesex 5.1. The unfiltered river waters contained the following proportions:—Thames at Hampton 5.1, New River Cut 2.2, and

the Lea at Angel Road 4.6.

The Thames at Hampton was, on December 9th, turbid and yellow in colour and of moderately good chemical, but bad bacterial quality. By storage for 14 days, the Chelsea Company reduced the number of bacteria to less than one twentieth of the original amount. As delivered by the five Companies drawing from this river, the water was, in every case, efficiently filtered, and, with one exception, of most excellent bacterial quality. Owing to the previous storage of inferior flood water, the supplies of the Chelsea and West Middlesex Companies were, chemically, inferior to those of other Thames Companies possessing a less amount of storage. Bacterially, however, the supplies of the two first named Companies were most excellent. The bacterial improvement effected by the various Companies is expressed by the following percentage numbers:—Chelsea 99.85, West Middlesex 99.81, Southwark (No. 4 filter) 99.62, (No. 8 filter) 99.21, Grand Junction (general filter well at Hampton) 99.56, (general filter well at Kew) 99.83, (South filter well at Kew) 99.89, and Lambeth 99.81.

The New River Cut, before entering the subsidence and storage reservoirs, was, on December 11th, turbid and pale yellow in colour and of excellent chemical but inferior bacterial quality. By passage through the storage reservoirs, the number of bacteria per c.c. was reduced to less than one half; and, after efficient filtration, the water was delivered of good chemical and bacterial quality. Bacterially, it was improved before delivery to the extent represented by the following percentage numbers:—General filter well 98·59, No. 4 filter well 98·13, and No. 8 filter well 98·97. The water, taken from the Lea by the East London Company at Angel Road on December 11th, was turbid and yellow in colour and of inferior quality both chemically and bacterially, although in both respects, better than the Thames at Hampton. After storage for 15 days, the number of bacteria per c.c. was reduced to nearly one fifth of the original amount, and, after efficient filtration, this water was delivered to consumers of good chemical quality, but the bacteria in the two Essex wells slightly exceeded the standard of 100 per c.c. The bacterial improvement, however, was represented by the following high percentage numbers:—Essex wells Nos. 1 and 2, 98·74, and West Middlesex well 99·18.

The deep-well waters of the Kent Company and of the Tottenham Local Board of Health were of excellent chemical quality for dietetic purposes, and that supplied by the Kent Company was bacterially absolutely sterile. The Tottenham supply, however, showed very slight turbidity. The waters of the Colne Valley and East London Companies contained a slight excess of vegetable organic matter over that usually met with in deep-well waters, and the East London well water was slightly turbid. The Colne Valley Company's water had been softened before delivery and

was thus rendered suitable for washing.

Seen through a stratum two feet deep, the Kent and Colne Valley Companies' waters were clear and 'colourless, the Tottenham very slightly turbid and colourless, the East London (deep-well) slightly turbid and colourless, the New River clear and very pale yellow, and the remaining waters clear and pale yellow.

The bacterioscopic examination of the raw river waters before and after storage, and of the supplies delivered by the various Companies and collected on the 9th, 10th, 11th, and 12th of

December, yielded the results contained in the following table:-

Description.	Microbes per c.c.	Temp. C.

Dr. Hill, F.I.C., Medical Officer of Health for Birmingham, reports that the water supplied to

that city was "clear and green in colour in a two-foot tube."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College, reports that the water supplied to that city from Loch Katrine was "light brown in colour, and contained a "little suspended matter."

I am, &c.

	Column 1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.

* Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the City. † Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the waters. The Table is to be read thus:—the Chelsea Company's water, collected on the 12th of December 1895, at the Horse Guards cab rank, had a temperature of 6°·4 C.; 100,000 lbs. of it contained 32·10 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained ·253 lb. of carbon and ·042 lb. of nitrogen. The above quantity of water also contained no ammonia and ·283 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was ·325 lb. The above weight of water also contained 1·8 lb. of chlorine and 22·1 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial callon by

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same

operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

General Register Office, Somerset House, January 20th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 19.7 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alpha. betically arranged, corresponded to the following annual rates per 1000:-

		Weeks	ending	-				Weeks	ending

Leeds - Leicester -	20·6 22·1	18.8	17.8	17.2	Wolverhampton	-	25.5	22.9	19.9	30.1

The highest annual death-rates per 1000 living, as measured by last week's mortality, were :- from measles, 1.1 in Swansea and in Manchester, 1.2 in London, 1.6 in Leicester, 1.8 in Wolverhampton, 2.2 in Oldham, 2.4 in Birmingham, 2.5 in Burnley, 3.4 in Norwich, and 4.0 in Salford; from whooping-cough, 1.1 in Oldham and in Sheffield, 1.3 in Leicester, 2.0 in Derby, and 2.6 in Bolton; and from diarrhæa, 1.1 in Oldham. In no case did the death-rate from scarlet fever or from "fever" reach 1.0 per 1000 in any of the thirty-three towns. The 100 deaths from diphtheria included 59 in London, 9 in West Ham, 6 in Birmingham, 4 in Liverpool, and 3 in Halifax. No death from small-pox was registered in any of the thirty-three towns,

LONDON.

In LONDON† 2491 BIRTHS and 1624 DEATHS were registered. Allowing for increase of population, the births were 376, and the deaths 669, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

[•] By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Sinall-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

per 1000 from all causes, which had been 17.8, 20.1, and 18.1 in the preceding three weeks, rose again last week to 19.1. During the four weeks ending on Saturday last the death-rate averaged 18.8 per 1000, being 8.0 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1624 deaths included 102 from measles, 25 from scarlet fever, 59 from

The 1624 deaths included 102 from measles, 25 from scarlet fever, 59 from diphtheria, 59 from whooping-cough, 12 from enteric fever, 1 from an ill-defined form of continued fever, 11 from diarrhæa and dysentery, and not one death from small-pox, from typhus, or from cholera; thus, 269 deaths were referred to these

diseases, being 55 above the corrected average weekly number.

The deaths from measles, which had been 97, 91, and 89 in the preceding three weeks, rose again last week to 102, exceeding the corrected average by 49; 17 cases belonged to Camberwell, 14 to Islington, 8 to St. Pancras, 7 to St. Marylebone, 7 to Newington, 7 to Lambeth, and 6 to Greenwich sanitary areas. The deaths from scarlet fever, which had been 17, 28, and 22 in the preceding three weeks, rose again last week to 25, exceeding the corrected average by 4; 3 cases belonged to Kensington, 3 to St. Pancras, and 3 to Hackney sanitary areas. The deaths from diphtheria, which had been 71, 66, and 48 in the preceding three weeks, rose again last week to 59, exceeding the corrected average by 30; 6 cases belonged to Islington, 5 to Hackney, 4 to Greenwich, and 4 to Plumstead sanitary areas. The deaths from whooping-cough, which had been 32, 39, and 40 in the preceding three weeks, further rose last week to 59, but were 23 below the corrected average; 7 cases belonged to Fulham, 5 to Hackney, and 5 to Camberwell sanitary areas. cases of enteric fever, which had been 23, 14, and 13 in the preceding three weeks, were 12 last week, the corrected average being 13; 2 cases belonged to St. Marylebone, and 2 to City of London sanitary areas. The deaths from diarrhea, which had been 15, 14, and 6 in the preceding three weeks, rose again last week to 11, but were 4 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 318, 314, and 320 in the preceding three weeks, further rose last week to 336, but were

413 below the corrected average.

The deaths attributed directly to influenza numbered 10, having been 8, 5, and

13 in the preceding three weeks.

Different forms of violence caused 73 deaths, concerning all but 2 of which inquests were held. Of these 73 deaths, 15 were cases of suicide, and 2 of homicide, while the remaining 56 were attributed to accident or negligence. One of these was referred to a vehicle in the street, 3 to conflagration, 5 to drowning, one to the effects of chloroform administered for surgical purposes, and 13 (including 12 of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 73 cases of small-pox, 2883 of scarlet fever, 661 of diphtheria, and 103 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 17 cases, against 12, 9, and 20; of scarlet fever, 280 cases, against 184, 320, and 290; of diphtheria, 99 cases, against 93, 98, and 96; and of enteric fever, 11 cases, against 10, 14, and 15.

GREATER LONDON.

In Greater London 3335 births and 2046 deaths were registered, corresponding to annual rates of 28·3 and 17·3 per 1000 of the estimated population. In the Outer Ring 10 deaths from measles, 5 from scarlet fever, 17 from diphtheria, 15 from whooping-cough, 2 from "fever", and 6 from diarrhoa were registered; 7 cases of measles and 4 of diphtheria occurred in Edmonton district, 9 cases of diphtheria in West Ham district, and 4 cases of whooping-cough in Acton subdistrict.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.78 inches, and that of the Thermometer 43°.0, the latter being 4°.8 above the week's average in the 50 years 1841–90. The direction of the wind was Westerly, the horizontal movement of the air being 22 per cent. above the week's average in the 16 years 1860–75. The duration of registered bright sunshine in the week was 1.5 hours; the measured rainfall amounted to 0.18 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox Scarlet Fever, Diphtheria, or Enteric Faver respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

WEEKLY RETURN

LONDON BIRTHS AND DEATHS

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

Price 11d. No. 4. 1896. Vol. LVII. WEEK ENDING SATURDAY, JANUARY 25.

> General Register Office, Somerset House, January 27th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.8 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

	Weeks end		Weeks ending
Towns.	Jan. Jan. Jan. 4. 11. 18. 25.	Towns.	Jan. Jan. Jan. Jan. 4. 11. 18. 25.
Croydon - Derby -	$\begin{array}{ c c c c c c c c c c c c c c c c c c c$	London Manchester - Newcastle-on-Tyne Norwich Nottingham - Oldham Plymouth - Portsmouth - Preston Salford Sheffield	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
Huddersfield Hull Leeds -	$ \begin{vmatrix} 16 \cdot 5 & 20 \cdot 9 & 27 \cdot 0 & 17 \cdot 1 \\ 18 \cdot 7 & 15 \cdot 1 & 14 \cdot 0 & 15 \cdot 1 \\ 21 \cdot 5 & 15 \cdot 3 & 16 \cdot 8 & 19 \cdot 8 \\ 18 \cdot 8 & 17 \cdot 8 & 17 \cdot 2 & 18 \cdot 5 \\ 19 \cdot 9 & 21 \cdot 0 & 21 \cdot 5 & 18 \cdot 9 \end{vmatrix} $	Swansea West Ham	15·2 13·0 14·5 16·3 22·7 14·8 24·3 16·9 15·8 18·6 15·8 14·0 22·9 19·9 30·1 16·3

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:-from measles, 1.0 in London and in Leicester, 1.8 in Birmingham, and 2.7 in Salford; from scarlet fever, 1.2 in Wolverhampton; from whooping-cough, 1.0 in West Ham and in Birkenhead, 1.2 in Portsmouth, and 2.2 in Bolton; from "fever", 1.1 in Gateshead; and from diarrhaa, 1.0 in Birkenhead. The 95 deaths from diphtheria included 51 in London, 12 in Birmingham, 4 in Salford, 3 in West Ham, 3 in Liverpool, 3 in Burnley, and 3 in Hull. No death from small-pox was registered in any of the thirty-three towns.

LONDON.

In LONDON 2452 BIRTHS and 1582 DEATHS were registered. Allowing for increase of population, the births were 370, and the deaths 449, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 20.1, 18.1, and 19.1 in the preceding

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses. Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, deed to the Outer Ring, or to other areas to which they belong.

three weeks, fell again last week to 18.6. During the four weeks ending on Saturday last the death-rate averaged 19.0 per 1000, being 7.3 per 1000 below

the mean rate in the corresponding periods of the ten years 1886-95.

The 1582 deaths included 86 from measles, 26 from scarlet fever, 51 from diphtheria, 64 from whooping-cough, 17 from enteric fever, 7 from diarrhæa and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 251 deaths were referred to these diseases,

being 54 above the corrected average weekly number.

The deaths from measles, which had been 91, 89, and 102 in the preceding three weeks, fell again last week to 86, but were 46 above the corrected average; 16 cases belonged to Camberwell, 12 to Marylebone, 8 to Newington, and 6 to Lambeth sanitary areas. The deaths from scarlet fever, which had been 28, 22, and 25 in the preceding three weeks, were 26 last week, exceeding the corrected average by 10; 4 cases belonged to Lambeth, 2 to Camberwell, and 2 to St. Luke sanitary areas. The deaths from diphtheria, which had been 66, 48, and 59 in the preceding three weeks, fell again last week to 51, but were 19 above the corrected average; 4 cases belonged to Lambeth, 4 to Camberwell, 4 to Greenwich, 4 to Fulham, 3 to St. Pancras, 3 to Hackney, 3 to Mile End Old Town, and 3 to Newington sanitary areas. The deaths from whooping-cough, which had been 39, 40, and 59 in the preceding three weeks, further rose last week to 64, but were 17 below the corrected average; 7 cases belonged to Camberwell, 5 to Fulham, 5 to Islington, 5 to Hackney, and 5 to Bethnal Green sanitary areas. The fatal cases of enteric fever, which had been 14, 13, and 12 in the preceding three weeks, rose again last week to 17, exceeding the corrected average by 7; 2 cases belonged to Paddington, 2 to Hammersmith, and 2 to Islington sanitary areas. The deaths from diarrhea, which had been 14, 6, and 11 in the preceding three weeks, fell again last week to 7, the corrected average being 17.

The deaths referred to diseases of the respiratory organs, which had been 314, 320, and 336 in the preceding three weeks, further rose last week to 356, but were

253 below the corrected average.

The deaths attributed directly to influenza numbered 9, having been 5, 13, and

10 in the preceding three weeks.

Different forms of violence caused 62 deaths, concerning all of which inquests were held. Of these 62 deaths, 6 were cases of suicide, and one of homicide, while the remaining 55 were attributed to accident or negligence. Three of these were referred to vehicles in the street, one to a conflagration, 5 to drowning, and 10 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 70 cases of small-pox, 2916 of scarlet fever, 667 of diphtheria, and 97 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 14 cases, against 9, 20, and 17; of scarlet fever, 290 cases, against 320, 290, and 280; of diphtheria, 122 cases, against 98, 96, and 99; and of enteric fever, 10 cases, against 14, 15, and 11.

GREATER LONDON.

In Greater London 3319 births and 2005 deaths were registered, corresponding to annual rates of 28.1 and 17.0 per 1000 of the estimated population. In the Outer Ring 9 from measles, 8 from scarlet fever, 9 from diphtheria, 14 from whooping-cough, 6 from "fever", and 4 from diarrhoa were registered. Four deaths from measles and 2 from scarlet fever occurred in Willesden sub-district; 5 deaths from diphtheria and 7 from whooping-cough occurred in West Ham district; 3 deaths from "fever" occurred in Brentford district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30.08 inches, and that of the Thermometer 39.5, the latter being 0.8 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 40 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 7.3 hours; the measured rainfall amounted to 0.26 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

DEATHS IN LONDON AND BIRTHS

OTHER QREAT TOWNS. THIRTY-TWO

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

WEEK ENDING SATURDAY, FEBRUARY 1. Price 11d. No. 5. 1896. Vol. LVII.]

> General Register Office, Somerset House, February 3rd, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.4 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	1	Weeks	ending			Weeks	ending

The highest annual death-rates per 1000 living, as measured by last week's mortality, were :- from measles, 1.0 in Norwich, in Leicester, and in Huddersfield, 1.2 in Salford, and 1.5 in Birmingham and in Burnley; and from whooping-cough, 1.2 in Sheffield, 1.4 in Leeds, 1.5 in Portsmouth, in Derby, and in Sunderland, and 3.0 in Bolton. In no case did the death-rate from scarlet fever, from "fever", or from diarrhæa reach 1.0 per 1000 in any of the thirty-three towns. The 93 deaths from diphtheria included 61 in London, 6 in Birmingham, 4 in Liverpool, 3 in West Ham, 3 in Portsmouth, and 3 in Newcastle-on-Tyne. Two deaths from small-pox were registered in Cardiff, but not one in any other of the thirty-three towns.

LONDON.

In LONDON† 2461 BIRTHS and 1516 DEATHS were registered. Allowing for increase of population, the births were 428, and the deaths 343, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

per 1000 from all causes, which had been 18·1, 19·1, and 18·6 in the preceding three weeks, further fell last week to 17·8. During the four weeks ending on Saturday last the death-rate averaged 18·4 per 1000, being 6·8 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1516 deaths included 50 from measles, 19 from scarlet fever, 61 from

The 1516 deaths included 50 from measles, 19 from scarlet fever, 61 from diphtheria, 64 from whooping-cough, 12 from enteric fever, 14 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 220 deaths were referred to these diseases,

being 27 above the corrected average weekly number.

The deaths from measles, which had been 89, 102, and 86 in the preceding three weeks, further fell last week to 50, but exceeded the corrected average by 19; 21 cases, including 7 which occurred in the workhouse, Gordon Road, Peckham, belonged to Camberwell sanitary area. The deaths from scarlet fever, which had been 22, 25, and 26 in the preceding three weeks, fell again last week to 19, which is also the corrected average; 4 cases belonged to Lambeth sanitary area. The deaths from diphtheria, which had been 48, 59, and 51 in the preceding three weeks, rose again last week to 61, exceeding the corrected average by 25; 8 cases belonged to Greenwich, 6 to Camberwell, 5 to Chelsea, and 4 to Plumstead sanitary areas. The deaths from whooping-cough, which had been 40, 59, and 64 in the preceding three weeks, were again 64 last week, the corrected average being 79; 11 cases belonged to Shoreditch and 7 to Camberwell sanitary areas. The fatal cases of enteric fever, which had been 13, 12, and 17 in the preceding three weeks, fell again last week to 12, which is also the corrected average; 2 cases belonged to Hackney, 2 to Poplar, and 2 to Wandsworth sanitary areas. The deaths from diarrhæa, which had been 6, 11, and 7 in the preceding three weeks, rose again last week to 14, the corrected average being also 14.

The deaths referred to diseases of the respiratory organs, which had been 320, 336, and 356 in the preceding three weeks, further rose last week to 366, but were

132 below the corrected average.

The deaths attributed directly to influenza numbered 18, having been 13, 10, and

9 in the preceding three weeks.

Different forms of violence caused 60 deaths, concerning all of which inquests were held. Of these 60 deaths, 9 were cases of suicide, and 3 of homicide, while the remaining 48 were attributed to accident or negligence. Four of these were referred to vehicles in the street, 2 to conflagrations, 5 to drowning, and 15 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 74 cases of small-pox, 2879 of scarlet fever, 687 of diphtheria, and 106 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 12 cases, against 20, 17, and 14; of scarlet fever, 273 cases, against 290, 280, and 290; of diphtheria, 102 cases, against 96, 99, and 122; and of enteric fever, 27 cases, against 15, 11, and 10.

GREATER LONDON.

In Greater London 3367 births and 1953 deaths were registered, corresponding to annual rates of 28·5 and 16·6 per 1000 of the estimated population. In the Outer Ring 6 deaths from measles, one from scarlet fever, 10 from diphtheria, 17 from whooping-cough, 3 from "fever", and 6 from diarrhoa were registered. Six deaths from diphtheria and 7 from whooping-cough occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30·42 inches, and that of the Thermometer 40°·0, the latter being 0°·4 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 54 per cent, below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 3·1 hours; the measured rainfall amounted to 0·11 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox Scarlet Fever, Diphtheria, or: Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

WEEKLY RETURN

OF

BIRTHS AND DEATHS IN LONDON

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 6. 1896. Vol. LVII.] WEEK ENDING SATURDAY, FEBRUARY 8. [Price 1\frac{1}{2}d.]

General Register Office, Somerset House, February 10th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in Thirty-three Great Towns of England and Wales corresponded to an annual rate of 20.5 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

	Wee	ks ending	3		1	Weeks	endin	g
Towns.	Jan. Jan 18. 25.		Feb.	Towns.	Jan. 18.	Jan. 25.	Feb.	Feb. 8.

	16.8 19.8			West Ham	15.8	14.0	16.2	16.6
	17.2 18.5			Wolverhampton -	30.1	16.3	15.1	24.7
Leicester -	21.5 18.9	21.5	22.6					

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1·0 in Salford, 1·4 in Birmingham, 1·5 in Burnley, 1·6 in Leicester, and 4·8 in Norwich; from whooping-cough, 1·0 in Burnley, 1·1 in Halifax, 1·2 in London and in Leeds, 1·4 in Manchester and in Sheffield, 1·5 in Portsmouth, 1·6 in Gateshead, 1·7 in Salford, and 3·9 in Bolton; from "fever", 1·3 in Bolton; and from diarrhaa, 1·0 in Burnley. The death-rate from scarlet fever did not reach 1·0 per 1000 in any of the thirty-three towns. The 97 deaths from diphtheria included 63 in London, 5 in West Ham, and 5 in Birmingham. One death from small-pox was registered in Swansea, but not one in any other of the thirty-three towns.

A 90274.—6. 650.—2/96. Wt. 259.

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

In London* 2656 births and 1762 deaths were registered. Allowing for increase of population, the births were 236, and the deaths 33, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 19.1, 18.6, and 17.8 in the preceding three weeks, rose again last week to 20.7. During the four weeks ending on Saturday last the death-rate averaged 19·1 per 1000, being 4·3 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1762 deaths included 76 from measles, 19 from scarlet fever, 63 from diphtheria, 99 from whooping-cough, 1 from typhus, 7 from enteric fever, 16 from diarrhea and dysentery, and not one death from small-pox, from any ill-defined form of continued fever, or from cholera; thus, 281 deaths were referred to these

diseases, being 103 above the corrected average weekly number.

The deaths from measles, which had been 102, 86, and 50 in the preceding three weeks, rose again last week to 76, and were 49 above the corrected average; 7 cases belonged to Hampstead, 7 to Islington, 5 to Bethnal Green, 5 to Greenwich, 4 to Kensington, 4 to St. Marylebone, 4 to St. Pancras, and 4 to Camberwell sanitary areas. The deaths from scarlet fever, which had been 25, 26, and 19 in the preceding three weeks, were again 19 last week, the corrected average being 18; 3 cases belonged to Shoreditch sanitary area. The deaths from diphtheria, which had been 59, 51, and 61 in the preceding three weeks, further rose last week to 63, and were 29 above the corrected average; 6 cases belonged to Islington, 6 to Greenwich, 5 to Chelsea, 5 to Battersea, and 4 to Fulham sanitary areas. The deaths from whooping-cough, which had been 59, 64, and 64 in the preceding three weeks, rose last week to 99, exceeding the corrected average by 24; 13 cases belonged to Islington, 13 to Camberwell, 9 to Poplar, 7 to Shoreditch, 7 to Battersea, 6 to St. Marylebone, and 6 to Bethnal Green sanitary areas. The death of a leather-cutter, aged 48 years, who had been removed from Laystall Street, in Holborn sanitary area, to the Homocopathic Hospital, was certified as due to typhus. The fatal cases of enteric fever, which had been 12, 17, and 12 in the preceding three weeks, further fell last week to 7, the corrected average being 8. The deaths from diarrhea, which had been 11, 7, and 14 in the preceding three weeks, further rose last week to 16, the corrected average being 15.

The deaths referred to diseases of the respiratory organs, which had been 336, 356, and 366 in the preceding three weeks, further rose last week to 446, but were

35 below the corrected average.

The deaths attributed directly to influenza numbered 14, having been 10, 9, and

18 in the preceding three weeks.

Different forms of violence caused 78 deaths, concerning all but one of which inquests were held. Of these 78 deaths, 10 were cases of suicide, 2 of homicide, and one of execution, while the remaining 65 were attributed to accident or negligence. Two of these were referred to vehicles in the street, 14 to burns and scalds, 7 to drowning, and 16 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.†

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 64 cases of small-pox, 2883 of scarlet fever, 706 of diphtheria, and 115 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:-Of small-pox, 6 cases, against 17, 14, and 12; of scarlet fever, 285 cases, against 280, 290, and 273; of diphtheria, 94 cases, against 99, 122, and 102; and of enteric fever, 16 cases, against 11, 10, and 27.

^{*} Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

† The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

GREATER LONDON.

In Greater London 3565 births and 2202 deaths were registered, corresponding to annual rates of 30·2 and 18·7 per 1000 of the estimated population. In the Outer Ring 10 deaths from measles, 12 from diphtheria, 14 from whooping-cough, and 4 from "fever" were registered. Six deaths from diphtheria and 8 from whooping-cough occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30.35 inches, and that of the Thermometer 39.2, the latter being 0.4 below the week's average in the 50 years 1841–90. The direction of the wind was South-Westerly, the horizontal movement of the air being 34 per cent. below the week's average in the 16 years 1860–75. The duration of registered bright sunshine in the week was 9.5 hours. No rain was measured during the week.

RETURNS OF LONDON WATER COMPANIES.

The London Water Companies have been good enough to furnish the following account of the number of services and the average daily amount of water supplied during the month of January 1896. The supply was in the ratio of 237 gallons to one service.

Note.—The Return for January 1896, as compared with that for the corresponding month of 1895, shows an increase of 12,205 services and a decrease of 1,724,192 gallons of water supplied daily.

Analysis of Metropolitan Water Supply during January, 1896.

Water-analysis Laboratory, The Yews, Reigate, 5th February, 1896.

I HAVE to report to you the results of the chemical analysis, and of the physical and bacterioscopic examination, of the waters supplied to the inner, and portions of the outer, circle of the Metropolis during the month of January 1896.

At the request of the Associated Metropolitan Water Companies, I have extended these monthly examinations to (a) the chemical and bacterioscopic condition of the raw river water at the intakes of the various Companies, and (b) to the bacteriology of the water as it issues from the filter beds of each Company, and before it is pumped into the distributing mains.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Taking the average amount of organic impurity in a given volume of the Kent Company's water during the nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Kent 0·9, Tottenham 1·4, Colne Valley and East London (deep-well) 2·1, New River 2·6, Grand Junction 3·3, Southwark 3·6, East London (river supply) 4·1, Lambeth 4·2, West Middlesex 4·4, and Chelsea 4·5. The unfiltered river waters contained the following proportions:—Thames at Hampton 4·4, New River Cut 2·5, and the Lea at Angel Road 4·3.

RESULTS OF ANALYSIS EXPRESSED IN PARTS PER 100,000.

^{*} Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the City. † Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the waters. The Table is to be read thus:—the Chelsea Company's water, collected on the 14th of January 1896, at the Horse Guards cab rank, had a temperature of 5° 2 C.; 100,000 lbs. of it contained 33.70 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained 236 lb. of carbon and 030 lb. of nitrogen. The above quantity of water also contained no ammonia and 312 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was 342 lb. The above weight of water also contained 1.9 lb. of chlorine and 23.3 lbs. of carbonate of lime, or an equivalent quantity of other hands on coar declaration in goddington.

of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same

operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

The Thames at Hampton was, on January 10th, turbid and pale yellow in colour and of good chemical, but bad bacterial quality. By storage for 13 days, the Chelsea Company reduced the number of bacteria to about one ninth of its original amount, whilst the Lambeth Company, who have storage for only six days, reduced the number by nearly one-half; and, by a preliminary filtration, the Grand Junction Company were enabled to supply their ordinery filters with water containing only about one-fortieth of the number of microbes present in a given volume of the River Thames. As delivered by the five Companies drawing from this river, the water was, in every case, efficiently filtered, and, without exception, of most excellent bacterial quality. The bacterial improvement effected by the various Companies is expressed by the following percentage numbers:—Chelsea 99·83, West Middlesex 99·62, Southwark (No. 4 filter) 99·76, (No. 8 filter) 99·69, Grand Junction (general filter well at Hampton) 99·58, (general filter well at Kew) 99·76, (South filter well at Kew) 99·93, and Lambeth 99·52.

The New River Cut, before entering the subsidence and storage reservoirs, was, on January 13th, turbid and very pale yellow in colour and of excellent chemical, and fairly good bacterial quality. By passing through two storage reservoirs, the number of bacteria per c.c. was reduced to much less than one half; and, after efficient filtration, the water was delivered of excellent chemical and bacterial quality. Bacterially, it was improved before delivery to the extent represented by the following percentage numbers:—General filter well 98·97, No. 3 filter well 98·41, and No. 7 filter well 98·89. The water, taken from the Lea by the East London Company at Angel Road on the 13th of January was turbid and pale yellow, of good chemical but rather bad bacterial quality. After storage for 15 days, the number of bacteria per c.c. was reduced to less than one half of the original amount, and, after efficient filtration, this water was delivered to consumers, of good chemical and, with one exception (the Middlesex well), of excellent bacterial quality. The bacterial improvement was represented by the following percentage numbers:—No. 1 Essex well 98·99, No. 2 Essex well 99·76, and Middlesex well 99·22.

The deep-well waters of the Kent, Colne Valley, and East London Companies, and of the Tottenham Local Board of Health were of good chemical quality, but there was a very slight degree of turbidity in the Tottenham and East London waters. The waters supplied by the Kent Company (the only one bacterially examined) was again absolutely sterile. The Colne Valley Company's water had been softened before delivery and thus rendered suitable for washing.

Seen through a stratum two feet deep, the Kent and Colne Valley Companies' waters were clear and colourless, the Tottenham and East London (deep-well) very slightly turbid and colourless, the New River clear and very pale yellow, and the remaining waters clear and pale yellow.

The bacterioscopic examination of the raw river waters before and after storage, and prelimnary filtration, and of the supplies delivered by the various Companies and collected on the 10th, 11th, 13th, and 14th of January yielded the results contained in the following tables:—

Description.	Microbes per c.c.	Temp. C.
RAW AND STORED RIVER WATERS. Thames at Hampton, January 10th "after storage for 13 days (Chelsea Company), January 10th 6 days (Lambeth Company), January 10th West Middlesex water passing on to filters 1-5, January 11th Grand Junction water arriving at Kew from preliminary filters at Hampton, January 11th "at Kew passing to filters 2, 3, 4, 5, and 6, January 11th New River Cut before passing through reservoirs, January 13th taken between the two reservoirs, January 13th after passing through reservoirs and just before filtration, January 13th River Lea at Angel Road, (East London Company), January 13th after storage for 15 days, January 13th FILTERED RIVER WATERS AS SUPPLIED.	11,560 1,360 6,560 3,460 280 300 2,510 1,580 1,040 6,720 3,140	4°2 4°1 4°6 4°0 4°9 4°8 4°8 4°6 5°4 4°0 3°8

Dr. Hill, F.I.C., Medical Officer of Health for Birmingham, reports that the water supplied to that city was "clear and yellowish green in a two-foot tube."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College, reports that the water supplied to that city from Loch Katrine was "light brown in colour, and contained a "little suspended matter."

The Registrar General, &c. &c.

I am, &c. E. FRANKLAND.

The numbers in this est		A 20								years 1826-95 raised by 5°55	1	+ 500			6	-2-44			

The numbers in this column are the average weekly Doths for the ten years 1826-95, raised by 5'541 per cent for increase of population, those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. What medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered titioner, the case is returned under the heading" no statement." The ordience at inquests is often insufficient to enable the Oroner to certify whather a violent death be the result of assident, murder, alaughter, or suicide. All such cases are classed under "accident."

WEEKLY RETURN

BIRTHS DEATHS AND LONDON

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.O.

No. 7. 1896. Vol. LVII. WEEK ENDING SATURDAY, FEBRUARY 15. Price 11d.

> General Register Office, Somerset House, February 17th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 19.3 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

		Weeks	ending	5		100	Weeks	ending	3

Leicester -	18.9	21.5	22.6	16.0					

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Birmingham and in Manchester, 1.1 in London, in Bristol, and in Sunderland, 1.5 in Burnley, 2.9 in Norwich, and 3.1 in Leicester; from whooping-cough, 1.0 in Liverpool, 1.3 in Leeds, and 1.5 in Salford; and from "fever," 1.0 in Derby. In no case did the death-rate from scarlet fever or from diarrhæa reach 1.0 per 1000 in any of the thirty-three towns. The 83 deaths from diphtheria included 45 in London, 5 in Birmingham, 5 in Leeds, 3 in Manchester, and 3 in Bradford. No death from small-pox was registered in any of the thirtythree towns.

LONDON.

In London† 2575 births and 1727 deaths were registered. Allowing for increase of population, the births were 203, and the deaths 135, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 18.6, 17.8, and 20.7 in the preceding

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

three weeks, fell again last week to 20°3. During the four weeks ending on Saturday last the death-rate averaged 19°4 per 1000, being 2°7 per 1000 below

the mean rate in the corresponding periods of the ten years 1886-95.

The 1727 deaths included 91 from measles, 23 from scarlet fever, 45 from diphtheria, 72 from whooping-cough, 10 from enteric fever, 6 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 247 deaths were referred to these diseases, being 64 above the corrected average weekly number.

The deaths from measles, which had been 86, 50, and 76 in the preceding three weeks, further rose last week to 91, the corrected average being 31; 12 cases belonged to St. Marylebone, 7 to Islington, 6 to Fulham, 6 to Bethnal Green, 5 to Shoreditch, and 5 to Camberwell sanitary areas. The deaths from scarlet fever, which had been 26, 19, and 19 in the preceding three weeks, rose again last week to 23, exceeding the corrected average by 5; 4 cases belonged to Mile End Old Town, 4 to Lambeth, and 3 to Shoreditch sanitary areas. The deaths from diphtheria, which had been 51, 61, and 63 in the preceding three weeks, fell again last week to 45, but exceeded the corrected average by 12; 5 cases belonged to Kensington, 5 to Greenwich, 4 to Paddington, and 4 to Islington sanitary areas. The deaths from whooping-cough, which had been 64, 64, and 99 in the preceding three weeks, fell again last week to 72, and were 7 below the corrected average; 8 cases belonged to Shoreditch, 8 to Poplar, 5 to Islington, 5 to Hackney, 5 to Bethnal Green, and 5 to Battersea sanitary areas. The fatal cases of enteric fever, which had been 17, 12, and 7 in the preceding three weeks, rose again last week to 10, which is also the corrected average; 4 cases belonged to Camberwell sanitary area. The deaths from diarrhea, which had been 7, 14, and 16 in the preceding three weeks, fell again last week to 6, the corrected average being 13.

The deaths referred to diseases of the respiratory organs, which had been 356, 366, and 446 in the preceding three weeks, fell again last week to 402, and were

109 below the corrected average.

The deaths attributed directly to influenza numbered 18, having been 9, 18, and

14 in the preceding three weeks.

Different forms of violence caused 65 deaths, concerning all but 2 of which inquests were held. Of these 65 deaths, 12 were cases of suicide, while the remaining 53 were attributed to accident or negligence. Four of these were referred to vehicles in the street, 4 to drowning, and 9 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 60 cases of small-pox, 2944 of scarlet fever, 712 of diphtheria, and 102 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 12 cases, against 14, 12, and 6; of scarlet fever, 303 cases, against 290, 273, and 285; of diphtheria, 97 cases, against 122, 102, and 94; and of enteric fever, 9 cases, against 10, 27, and 16.

GREATER LONDON.

In Greater London 3462 births and 2189 deaths were registered, corresponding to annual rates of 29·4 and 18·6 per 1000 of the estimated population. In the Outer Ring 22 deaths from measles, 7 from scarlet fever, 7 from diphtheria, 15 from whooping-cough, 6 from "fever," and 4 from diarrhoa were registered. Five deaths from measles occurred in Croydon district, 5 in Hendon district, and 3 in Bromley sub-district; 4 deaths from scarlet fever, 6 from whooping-cough, and 3 from "fever" occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30.24 inches, and that of the Thermometer 43°.9, the latter being 5°.1 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 20 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 13.0 hours. The measured rainfall amounted to 0.14 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from [Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

* See note * on first page of this return.

NNE. & NE.	& NE.	19	The results apply to the civil day, or from midnight to midnight. The height of the cistern of the barometer is 189 feet above the mean level of the sea; no	correction has been applied to the readings to reduce to sea level. Observations are usually taken at 60.4.M.; noon; 8h. P.M.; and 8h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records mad during the twenty vears ending 1873 for the harometer are	during the twenty years ending 1988 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the marking and minimum thermometers for mean daily value of temperature of the airmon	(column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glasher's Hygrometrical Lables.	The average temperature of the air is that derived from a discussion of the bservations made at Greenwich during the 50 years ending 1880, and that of horizontal movement of the air from a discussion of the amenometric records for the 16 years ending 1875. In reading, the columns 9 and 24 it will be borne in mind that + indicates "higher" and	. Coder, than the brenge. The values given in column 17 are not corrected for the index error of the thermometer, inch cannot be defermined.	The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :P. positive; N. negstive; w. weak; m. moderate; s. strong; and v. variable. (The numbers in column 28, derived from the Commbol States Small of The Commbol States Small o	the aggregate duration of bright sunshine on each day.

WEEKLY RETURN

BIRTHS AND DEATHS LONDON IN AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY HYRE AND SPOTTISWOODE, 9, HAST HARDING ST., FETTER LANE, E.C.

WEEK ENDING SATURDAY, FEBRUARY 22. No.'8. 1896. Vol. LVII.] Price $1\frac{1}{2}d$.

> General Register Office, Somerset House, February 24th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 19.4 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

Leicester -	21.5	22.6	16.0	18.4					

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:-from measles, 1.2 in Salford, 1.3 in Croydon, 1.4 in London, 1.7 in Birmingham, 2.0 in Burnley, 2.1 in Leicester, and 4.3 in Norwich; from whoopingcough, 1.0 in London and in Derby, 1.1 in Gateshead, 1.2 in Manchester, 1.3 in Bolton, 1.4 in Sheffield, 1.6 in West Ham, and 1.9 in Cardiff; and from diarrhæa, 1.2 in Wolverhampton. In no case did the death-rate from scarlet fever or from "fever" reach 1.0 per 1000 in any of the thirty-three towns. The 83 deaths from diphtheria included 48 in London, 4 in Liverpool, 3 in West Ham, 3 in Wolverhampton, 3 in Birmingham, and 3 in Burnley. No death from small-pox was registered in any of the thirty-three towns.

LONDON.

In London't 2497 BIRTHS and 1705 DEATHS were registered. Allowing for increase of population, the births were 307, and the deaths 289, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

per 1000 from all causes, which had been 17.8, 20.7, and 20.3 in the preceding three weeks, further fell last week to 20.0. During the four weeks ending on Saturday last the death-rate averaged 19.7 per 1000, being 2.5 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1705 deaths included 119 from measles, 13 from scarlet fever, 48 from diphtheria, 89 from whooping-cough, 16 from enteric fever, 1 from an ill-defined form of continued fever, 7 from diarrhæa and dysentery, and not one death from small-pox, from typhus, or from cholera; thus, 293 deaths were referred to these

diseases, being 101 above the corrected average weekly number.

The deaths from measles, which had been 50, 76, and 91 in the preceding three weeks, further rose last week to 119, exceeding the corrected average by 78; 17 cases belonged to Islington, 17 to Camberwell, and 12 to St. Marylebone sanitary areas. The deaths from scarlet fever, which had been 19, 19, and 23 in the preceding three weeks, fell again last week to 13, and were 4 below the corrected average. The deaths from diphtheria, which had been 61, 63, and 45 in the preceding three weeks, rose again last week to 48, exceeding the corrected average by 16; 6 cases belonged to Camberwell and 4 to Lambeth sanitary areas. The deaths from whooping-cough, which had been 64, 99, and 72 in the preceding three weeks, rose again last week to 89, exceeding the corrected average by 14; 9 cases belonged to Bethnal Green, 8 to Hackney, 8 to Shoreditch, and 7 to Camberwell sanitary areas. The fatal cases of enteric fever, which had been 12, 7, and 10 in the preceding three weeks, further rose last week to 16, and were just double the corrected average; 3 cases belonged to Greenwich sanitary area. The deaths from diarrhæa, which had been 14, 16, and 6 in the preceding three weeks, were 7 last week, the corrected average being 17.

The deaths referred to diseases of the respiratory organs, which had been 366, 446, and 402 in the preceding three weeks, further fell last week to 377, and were

204 below the corrected average.

The deaths attributed directly to influenza numbered 8, having been 18, 14, and

18 in the preceding three weeks.

Different forms of violence caused 65 deaths, concerning all of which inquests were held. Of these 65 deaths, 4 were cases of suicide, and 2 of homicide, while the remaining 59 were attributed to accident or negligence. Five of these were referred to vehicles in the streets, 9 to a conflagration, 6 to drowning, one to the effects of an anæsthetic administered for surgical purposes, and 8 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 58 cases of small-pox, 2937 of scarlet fever, 713 of diphtheria, and 94 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 5 cases, against 12, 6, and 12; of scarlet fever, 234 cases, against 273, 285, and 303; of diphtheria, 108 cases, against 102, 94, and 97; and of enteric fever, 14 cases, against 27, 16, and 9.

GREATER LONDON.

In Greater London 3365 births and 2141 deaths were registered, corresponding to annual rates of 28.5 and 18.2 per 1000 of the estimated population. In the Outer Ring 20 deaths from measles, 2 from scarlet fever, 16 from diphtheria, 19 from whooping-cough, 4 from "fever," and 3 from diarrhoa were registered. Eight deaths from measles occurred in Bromley sub-district, 4 in Croydon district, and 3 in Wimbledon sub-district; 5 deaths from diphtheria occurred in West Ham district, and 3 in Brentford district; 13 deaths from whooping-cough occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.93 inches, and that of the Thermometer 40°.8, the latter being 1°.1 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 36 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 14.5 hours. The measured rainfall amounted to 0.16 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

The numbers in this co						-								-	-				

The numbers in this column are the average weekly Deaths for the ten years 1876-95, raised by 5'541 per cent for increase of population. Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated," which are so certified by registered medical men. When medical statements that the deceased has, or nas not, been vaccinated, or when the same of death is not certified by a registered tetitioner, the case is returned under the heading." no statement."

The cridence at inquests is often insufficient to cannot one Coroner to certify whether a violent death be the result of accident, murder, aslaughter, or suicide. All such cases are classed under "accident."

LONDON DEATHS AND BIRTHS

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

WEEK ENDING SATURDAY, FEBRUARY 29. Price $1\frac{1}{3}d$. No. 9. 1896. Vol. LVII.

> General Register Office, Somerset House, March 2nd, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 20.0 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	Weeks ending		Week	s ending

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Huddersfield and in Newcastle-on-Tyne, 1.1 in Manchester, 1.2 in Birmingham and in Salford, 1.3 in Leeds, 1.5 in London, 1.9 in Birkenhead and in Sunderland, 2.9 in Leicester, and 4.8 in Norwich; and from whooping-cough, 1.0 in Birkenhead, 1.2 in Plymouth, in Salford, in Leeds, and in Sheffield, 1.5 in Derby, 1.6 in West Ham, in Manchester, and in Bradford, and 2.6 in Bolton. In no case did the death-rate from scarlet fever, from "fever," or from diarrhea reach 1.0 per 1000 in any of the thirty-three towns. The 91 deaths from diphtheria included 48 in London, 10 in Birmingham, 6 in Liverpool, 4 in Bradford, 3 in Ports: 1, 3 in Hull, and 3 in Newcastle-on-Tyne, No death from small-pox was registered in any of the thirty-three towns.

LONDON.

In London† 2628 BIRTHS and 1729 DEATHS were registered. Allowing for increase of population, the births were 152, and the deaths 289, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

per 1000 from all causes, which had been 20.7, 20.3, and 20.0 in the preceding three weeks, rose again last week to 20.3. During the four weeks ending on Saturday last the death-rate averaged 20.3 per 1000, being 2.0 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1729 deaths included 128 from measles, 20 from scarlet fever, 48 from diphtheria, 67 from whooping-cough, 8 from enteric fever, 15 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 286 deaths were referred to these diseases,

being 105 above the corrected average weekly number.

The deaths from measles, which had been 76, 91, and 119 in the preceding three weeks, further rose last week to 128, exceeding the corrected average by 89; 22 cases belonged to St. Marylebone, 17 to Islington, 11 to Camberwell, 8 to Shoreditch, 7 to Wandsworth, and 7 to Greenwich sanitary areas. The deaths from scarlet fever, which had been 19, 23, and 13 in the preceding three weeks, rose again last week to 20, exceeding the corrected average by 5; 3 cases belonged to Kensington, 2 to Shoreditch, 2 to Battersea, 2 to Camberwell, and 2 to Greenwich sanitary areas. The deaths from diphtheria, which had been 63, 45, and 48 in the preceding three weeks, were again 48 last week, the corrected average being 31; 9 cases belonged to Islington, 4 to St. Pancras, and 4 to Greenwich sanitary areas. The deaths from whooping-cough, which had been 99, 72, and 89 in the preceding three weeks, fell again last week to 67, and were 4 below the corrected average; 8 cases belonged to Shoreditch, 7 to Hackney, 6 to Wandsworth, and 5 to Hammersmith sanitary areas. The fatal cases of enteric fever, which had been 7, 10, and 16 in the preceding three weeks, fell again last week to 8, which is also the corrected average; 2 cases belonged to Bermondsey sanitary area. The deaths from diarrhæa, which had been 16, 6, and 7 in the preceding three weeks, rose last week to 15, which is also the corrected average,

The deaths referred to diseases of the respiratory organs, which had been 446, 402, and 377 in the preceding three weeks, rose again last week to 404, but were

213 below the corrected average.

The deaths attributed directly to influenza numbered 17, having been 14, 18, and 8 in the preceding three weeks.

The death of a male, aged 8 years, at Plumstead, was certified as due to

hydrophobia.

Different forms of violence caused 43 deaths, concerning all but 2 of which inquests were held. Of these 43 deaths, 5 were cases of suicide, 1 of homicide, and 1 of execution, while the remaining 36 were attributed to accident or negligence. Three of these were referred to vehicles in the streets, and 11 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 51 cases of small-pox, 2933 of scarlet fever, 717 of diphtheria, and 84 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:-Of small-pox, 1 case, against 6, 12, and 5; of scarlet fever, 244 cases, against 285, 303, and 234; of diphtheria, 97 cases, against 94, 97, and 108; and of enteric fever, 7 cases, against 16, 9, and 14.

GREATER LONDON.

In Greater London 3599 births and 2175 deaths were registered, corresponding to annual rates of 30.5 and 18.4 per 1000 of the estimated population. Outer Ring 18 deaths from measles, 3 from scarlet fever, 4 from diphtheria, 19 from whooping-cough, 3 from "fever," and 4 from diarrheea were registered. Five deaths from measles occurred in Bromley sub-district; 13 deaths from whooping-cough occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was $30^{\circ}05$ inches, and that of the Thermometer $37^{\circ}\cdot 6$, the latter being $2^{\circ}\cdot 4$ below the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 10 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 19.6 hours. The measured rainfall amounted to 0.06 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pex, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

WEEKLY RETURN

OF

BIRTHS AND DEATHS IN LONDON

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office,
AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 10. 1896. Vol. LVII.

WEEK ENDING SATURDAY, MARCH 7.

[Price 11d.

General Register Office, Somerset House, March 9th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in Thirty-three Great Towns of England and Wales corresponded to an annual rate of 20.7 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1·0 in Birmingham and in Burnley, 1·1 in Bristol, 1·2 in Sheffield, 1·8 in London, 2·0 in Newcastle-on-Tyne, 2·5 in Salford, 2·6 in Leicester, 2·9 in Birkenhead, and 4·8 in Norwich; from whooping-cough, 1·1 in Sunderland, 1·2 in Sheffield, 1·3 in Bolton, 1·5 in Oldham, and 1·6 in Huddersfield; and from "fever," 1·4 in Norwich. In no case did the death-rate from scarlet fever or from diarrhæa reach 1·0 per 1000 in any of the thirty-three towns. The 70 deaths from diphtheria included 46 in London, and 3 in Liverpool. Two deaths from small-pox were registered belonging to London and one to Bristol, but not one belonging to any other of the thirty-three towns.

A 90274.—10. 650.—3/96. Wt. 259.

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

In London* 2534 births and 1846 deaths were registered. Allowing for increase of population, the births were 246, and the deaths 232, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 20.3, 20.0, and 20.3 in the preceding three weeks, further rose last week to 21.7. During the four weeks ending on Saturday last the death-rate averaged 20.6 per 1000, being 2.7 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1846 deaths included 2 from small-pox, 152 from measles, 15 from scarlet fever, 46 from diphtheria, 85 from whooping-cough, 7 from enteric fever, 1 from an ill-defined form of continued fever, 9 from diarrhea and dysentery, and not one death from typhus, or from cholera; thus, 317 deaths were referred to these diseases,

being 130 above the corrected average weekly number.

The 2 fatal cases of small-pox belonged respectively to Lambeth and Greenwich sanitary areas. The deaths from measles, which had been 91, 119, and 128 in the preceding three weeks, further rose last week to 152, exceeding the corrected average by 105; 23 cases belonged to Islington, 17 to St. Marylebone, 15 to Camberwell, 9 to Shoreditch, 9 to Lambeth, and 8 to Greenwich sanitary areas. deaths from scarlet fever, which had been 23, 13, and 20 in the preceding three weeks, fell again last week to 15, the corrected average being 14; 2 cases belonged to Shoreditch sanitary area. The deaths from diphtheria, which had been 45, 48, and 48 in the preceding three weeks, were 46 last week, exceeding the corrected average by 18; 8 cases belonged to Camberwell, 4 to St. Pancras, 3 to Fulham, 3 to Clerkenwell, and 3 to Bethnal Green sanitary areas. The deaths from whoopingcough, which had been 72, 89, and 67 in the preceding three weeks, rose again last week to 85, exceeding the corrected average by 14; 14 cases belonged to Poplar, 8 to Bethnal Green, and 8 to Camberwell sanitary areas. The fatal cases of enteric fever, which had been 10, 16, and 8 in the preceding three weeks, were 7 last week, being 2 below the corrected average; 2 cases belonged to Poplar sanitary area. The deaths from diarrhea, which had been 6, 7, and 15 in the preceding three weeks, fell again last week to 9, and were 7 below the corrected

The deaths referred to diseases of the respiratory organs, which had been 402, 377, and 404 in the preceding three weeks, further rose last week to 433, but were

187 below the corrected average.

The deaths attributed directly to influenza numbered 15, having been 18, 8, and 17 in the preceding three weeks.

The death of a male, aged 6 years, who had been removed from Couthurst Road, Blackheath, to Guy's Hospital, was certified, after inquest, as due to hydrophobia.

Different forms of violence caused 67 deaths, concerning all but 2 of which inquests were held. Of these 67 deaths, 9 were cases of suicide, and 1 of homicide, while the remaining 57 were attributed to accident or negligence. Three of these were referred to vehicles in the streets, 3 to drowning, and 17 (of infants under one year of age) to suffocation in bed.

CASES of INFECTIOUS SICKNESS in HOSPITALS.†

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 52 cases of small-pox, 2857 of scarlet fever, 700 of diphtheria, and 82 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:-Of small-pox, 13 cases, against 12, 5, and 1; of scarlet fever, 244 cases, against 303, 234, and 244; of diphtheria, 70 cases, against 97, 108, and 97; and of enteric fever, 4 cases, against 9, 14, and 7.

^{*} Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, the figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or, Enteric Fover respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

GREATER LONDON.

In Greater London 3469 births and 2314 deaths were registered, corresponding to annual rates of 29.4 and 19.6 per 1000 of the estimated population. In the Outer Ring 1 death from small-pox, 27 from measles, 1 from scarlet fever, 5 from diphtheria, 16 from whooping-cough, 6 from "fever," and 1 from diarrheea were registered. The death from small-pox occurred in Wimbledon sub-district; 6 deaths from measles occurred in West Ham district, 4 in Hendon district, and 4 in Chislehurst sub-district; 6 deaths from whooping-cough occurred in West Ham district, and 6 in Brentford district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.28 inches, and that of the Thermometer 43°.9, the latter being 3°.2 above the week's average in the 50 years 1841-90. The direction of the wind was south-westerly, the horizontal movement of the air being 59 per cent. above the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 5.6 hours. The measured rainfall amounted to 1.01 inches.

RETURNS OF LONDON WATER COMPANIES.

The LONDON WATER COMPANIES have been good enough to furnish the following account of the number of services and the average daily amount of water supplied during the month of February 1896. The supply was in the ratio of 235 gallons to one service.

COMPANIES.	Number o	f Services.	Daily Supp in Ga	
	FFBRUARY.	FEBRUARY.	FEBRUARY.	FFBRUARY.
	1895.	1896.	1895.	1896.

Note.—The Return for February 1896, as compared with that for the corresponding month of 1895, shows an increase of 12,933 services and a decrease of 25,849,111 gallons of water supplied daily.

Analysis of Metropolitan Water Supply during February, 1896.

Water-analysis Laboratory, The Yews, Reigate,

7th March, 1896. SIR.

I HAVE to report to you the results of the chemical analysis, and of the physical and bacterioscopic examination, of the waters supplied to the inner, and portions of the outer, circle

of the Metropolis during the month of February 1896.

At the request of the Associated Metropolitan Water Companies, I have extended these monthly examinations to (a) the chemical and bacterioscopic condition of the raw river water at the intakes of the various Companies, and (b) to the bacteriology of the water as it issues from the filter beds of each Company, and before it is pumped into the distributing mains.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Taking the average amount of organic impurity in a given volume of the Kent Company's water during the nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Kent 0.8, Tottenham 1.3, New River 1.8, East London (deep-well) 2.0, Coine Valley 2.6, West Middlesex 2.8, Chelsea and Lambeth 2.9, Southwark 3.1, Grand Junction 3.2, and East London (river supply) 3.4. The unfiltered river waters contained the following proportions:—Thamps at Hampton 3.6. New Biver Cut 1.5, and waters contained the following proportions:-Thames at Hampton 3.6, New River Cut 1.5, and the Lea at Angel Road 2.8.

The Thames at Hampton was, on February 10th, turbid and pale yellow in colour and of very good chemical, but bad bacterial quality. By storage for 13 days, the Chelsea Company were enabled to supply their filters with water containing less than one-fiftieth of the number of microbes present in the raw river water; the Lambeth Company, who have storage for only six

days, reduced the number to less than one-half; and the West Middlesex Company, by storage for less than seven days, to one-fifteenth; whilst by a preliminary filtration, the Grand Junction Company were enabled to supply their ordinary filters with water containing only one-fiftieth of the number of microbes present in a given volume of the raw river water. As delivered by the five Companies drawing from this river, the water was, in every case, efficiently filtered, and, with three exception, of most excellent bacterial quality. The bacterial improvement effected by the various Companies is expressed by the following per-centage numbers:—Chelsea 99.84, West Middlesex 99.94, Southwark (No. 4 filter) 99.91, (No. 8 filter) 98.34, Grand Junction (general filter well at Hampton) 99.54, (general filter well at Kew) 99.91, (South filter well at

Kew) 99.63, and Lambeth 99.79. The New River Cut, before entering the subsidence and storage reservoirs, was, on February 12th, turbid and very pale yellow in colour. It was of most excellent chemical, and fairly good bacterial, quality. By passing through two storage reservoirs, the number of bacteria per c.c. was only reduced by about one-fourth of the original amount; but, after efficient filtration, the water was delivered in excellent chemical and bacterial condition. Bacterially, it was improved before delivery to the extent represented by the following percentage numbers:—General filter well 98.85, No. 7 filter well 99.04, and No. 9 filter well 97.69. The water, taken from the Lea by the East London Company at Angel Road on the 12th of February, was turbid and pale yellow in colour, and of very good chemical, but indifferent bacterial quality. After storage for 15 days, the number of bacteria per c.c. was reduced to nearly one-fifth of the original amount, and, after efficient filtration, this water was delivered to consumers, of good chemical and, with one exception (the Middlesex well), of excellent bacterial quality. The bacterial improvement was represented by the following percentage numbers:—No. 1 Essex well 99 44, No. 2 Essex well 99 64, and Middlesex well 98 27.

The deep-well waters of the Kent Company and of the Tottenham Local Board of Health were of good chemical quality, but those delivered by the Colne Valley and East London Companies contained somewhat more organic matter than is usual in deep-well waters. The Tottenham and East London samples exhibited a very slight degree of turbidity. The water supplied by the Kent Company (the only one bacterially examined) contained only four microbes per c.c. The Colne Valley Company's water had been softened before delivery, and thus rendered suitable for

washing.

Seen through a stratum two feet deep, the Kent and Colne Valley Companies' waters were clear and colourless, the Tottenham and East London (deep-well) very slightly turbid and colourless, the New River clear and nearly colourless, and the remaining waters clear and very pale yellow.

The bacterioscopic examination of the raw river waters before and after storage, and preliminary filtration, and of the supplies delivered by the various Companies and collected on the 10th, 11th, 12th, and 13th of February yielded the results contained in the following tables:-

DESCRIPTION.	Microbes per c.c.	Temp. C.

^{*} Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the City. † Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the waters. The Table is to be read thus:—the Chelsea Company's water, collected on the 13th of February The Table is to be read thus:—the Chelsea Company's water, collected on the 13th of February 1896, at the Horse Guards cab rank, had a temperature of 6°·3 C.; 100,000 lbs. of it contained 32·10 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained ·145 lb. of carbon and ·028 lb. of nitrogen. The above quantity of water also contained no ammonia and ·273 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was ·301 lb. The above weight of water also contained 1·8 lb. of chlorine and 22·1 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

Dr. Hill, F.I.C., Medical Officer of Health for Birmingham, reports that the water supplied to that city was "almost clear and green in colour in a two-foot tube. It contained an unusually "large quantity of free ammonia."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College, reports that the water supplied to that city from Loch Katrine was "light brown in colour, and contained a "little suspended matter."

The Registrar General, &c. &c.

I am, &c. E. FRANKLAND.

TABLE 9.-METECROLOGICAL OBSERVATIONS taken at the Rozar OBSERVATORY, GREENWIGH, during the Week ending Saturday, 7TH MARCH, 1896. Under the Superintendence of the Astronomer Royal.]

2.2 0.1 0.0 2.1 made at Greenwich during the 50 years ending 1890, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875.

"In reading the columns 9 and 24 it will be borne in mind that + indicates "higher," and "tower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records mad, during the twenty years ending 1873 for the barometer, and during the Wenty years ending 1388 for the thermometers. With the corrected mean reading of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced The record of Electricity is derived from Thomson's self-registering Electrometer. The symbols employed are :-- P. positive; W. negstive; W. weak; m. moderate; s, strong; and The reading of the barometer decreased from 29.84 in, at the beginning of the week to bservations The numbers in column 28, derived from the Campbell-Stokes Sunshine Instrument, show from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygro-The height of the cistern of the barometer is 159 feet above the mean level of the sea; in a Gauge whose receiving surface is 5 inches in. 0.07 0.30 Sum 10.0 10.7 The average temperature of the air is that derived from a discussion of the Depar-ture from Average of 16 Years. LONDON DEATHS IN AND BIRTHS

AND IM

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

WEEK ENDING SATURDAY, MARCH 14. No. 11. 1896. Vol. LVII.

General Register Office, Somerset House, March 16th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England nd Wales corresponded to an annual rate of 20.0 per 1000 of their aggregate opulation, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphaetically arranged, corresponded to the following annual rates per 1000:-

		Weeks	ending	-		I		Weeks	ending	3

Leicester -	18.4	20.2	20.5	20.5						1,0

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Salford, 1.1 in Oldham, 1.2 in Birmingham, 1.5 in Manchester and in Sunderland, 1.6 in London and in Bristol, 2.2 in Newcastleon-Tyne, 2·4 in Birkenhead, 2·5 in Burnley, 2·9 in Leicester, and 5·3 in Norwich; from whooping-cough, 1·1 in Sunderland, 1·3 in London, 1·4 in Sheffield, 1·5 in Birmingham, 1.7 in Salford, 1.8 in Leeds, and 2.2 in Bolton; and from "fever," 1.0 n Derby. In no case did the death-rate from scarlet fever or from diarrhæa reach 10 per 1000 in any of the thirty-three towns. The 91 deaths from diphtheria included 45 in London, 10 in Birmingham, 9 in Liverpool, 5 in Manchester, and 4 in Sheffield. No death from small-pox were registered in any of the thirty-three towns,

LONDON.

In London† 2806 BIRTHS and 1752 DEATHS were registered. Allowing for ncrease of population, the births were 8, and the deaths 234, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

^{*}By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Sinall-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum advantal and in the Metropolitan Asylums Board Hospitals within Registration London. As far as wracticable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, unded to the Outer Ring, or to other areas to which they belong.

per 1000 from all causes, which had been 20.0, 20.3, and 21.7 in the preceding three weeks, fell again last week to 20.6. During the four weeks ending on Saturday last the death-rate averaged 20.7 per 1000, being 3.2 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1752 deaths included 137 from measles, 21 from scarlet fever, 45 from

diphtheria, 110 from whooping-cough, 10 from enteric fever, 10 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 333 deaths were referred to these diseases,

being 137 above the corrected average weekly number.

The deaths from measles, which had been 119, 128, and 152 in the preceding three weeks, fell again last week to 137, but were 87 above the corrected average; 15 cases belonged to St. Marylebone, 14 to Islington, 11 to Lambeth, 10 to Camberwell, and 9 to Kensington sanitary areas. The deaths from scarlet fever, which had been 13, 20, and 15 in the preceding three weeks, rose again last week to 21, exceeding the corrected average by 5; 3 cases belonged to St. Pancras, 3 to St. George Southwark, and 2 to Lambeth sanitary areas. The deaths from diphtheria, which had been 48, 48, and 46 in the preceding three weeks, were 45 last week, the corrected average being 33; 5 cases belonged to Camberwell, 4 to Fulham, 4 to St. Pancras, 3 to Paddington, 3 to Kensington, 3 to Shoreditch, and 3 to Newington sanitary areas. The deaths from whooping-cough, which had been 89, 67, and 85 in the preceding three weeks, further rose last week to 110, exceeding the corrected average by 39; 13 cases belonged to Islington, 13 to Bethnal Green, and 11 to Poplar sanitary areas. The fatal cases of enteric fever, which had been 16, 8, and 7 in the preceding three weeks, rose again last week to 10, the corrected average being 8; 2 cases belonged to Camberwell sanitary area. The deaths from diarrhæa, which had been 7, 15, and 9 in the preceding three weeks, were 10 last week, the corrected average being 15.

The deaths referred to diseases of the respiratory organs, which had been 377, 404, and 433 in the preceding three weeks, fell again last week to 377, and were

205 below the corrected average.

The deaths attributed directly to influenza numbered 18, having been 8, 17, and

15 in the preceding three weeks.

Different forms of violence caused 64 deaths, concerning all but one of which inquests were held. Of these 64 deaths, 12 were cases of suicide, and one of homicide, while the remaining 51 were attributed to accident or negligence. Six of these were referred to vehicles in the streets, one to the effects of chloroform administered for surgical purposes, and 12 (including 11 of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 42 cases of small-pox, 2764 of scarlet fever, 699 of diphtheria, and 77 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 4 cases, against 5, 1, and 13; of scarlet 217 fever, cases, against 234, 244, and 244; of diphtheria, 102 cases, against 108, 97, and 70; and of enteric fever, 6 cases, against 14, 7, and 4.

GREATER LONDON.

In Greater London 3767 births and 2177 deaths were registered, corresponding to annual rates of 31.9 and 18.5 per 1000 of the estimated population. In the Outer Ring, 30 deaths from measles, 3 from scarlet fever, 12 from diphtheria, 18 from whooping-cough, 3 from "fever," and 2 from diarrhœa were registered. Seven deaths from measles occurred in Willesden sub-district, and 6 in Edmonton sub-district; 6 deaths from diphtheria, 10 from whooping-cough, and 3 from "fever" occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.84 inches, and that of the Thermometer 46.4, the latter being 5.5 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 11 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 3.5 hours. The measured rainfall amounted to 0.38 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

WEEKLY RETURN

BIRTHS AND DEATHS LONDON IN

AND IN

THIRTY-TWO OTHER GREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 12. 1896. Vol. LVII.

WEEK ENDING SATURDAY, MARCH 21.

Price 11d.

General Register Office, Somerset House, March 23rd, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 19.2 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	Weeks ending		Weeks ending
Towns.	Feb. Mar. Mar. Mar. 29. 7. 14. 21.	Towns.	Feb. Mar. Mar. Mar. 29. 7. 14. 21.
	$ \begin{array}{ c c c c c c c c c c c c c c c c c c c$	Liverpool London Manchester - Newcastle-on-Tyne Norwich Nottingham - Oldham Plymouth Portsmouth	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$
Derby - Gateshead - Halifax - Huddersfield Hull	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$	Swansea West Ham	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1·1 in Manchester, 1·2 in Liverpool, 1·5 in London, in Salford, and in Newcastle-on-Tyne, 1·6 in Bristol and in Birmingham, 1·8 in Croydon and in Leicester, 1.9 in Birkenhead and in Sunderland, 2.0 in Burnley, 2.2 in Oldham, and 3.8 in Norwich; and from whooping-cough, 1.0 in Salford, 1.2 in London, 1.3 in Bolton, 1.5 in Derby, 1.6 in Cardiff, and 1.8 in Bradford. In no case did the death-rate from scarlet fever, from "fever," or from diarrhæa reach 1.0 per 1000 in any of the thirty-three towns. The 72 deaths from diphtheria included 52 in London, 6 in Birmingham, 3 in West Ham, and 3 in Liverpool. One death from small-pox was registered in Swansea, but not one in any other of the thirty-three towns,

LONDON.

In London't 2483 BIRTHS and 1603 DEATHS were registered. Allowing for increase of population, the births were 263, and the deaths 266, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

per 1000 from all causes, which had been 20.3, 21.7, and 20.6 in the preceding three weeks, further fell last week to 18.8. During the four weeks ending on Saturday last the death-rate averaged 20.4 per 1000, being 3.0 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1602 deaths included 129 from measles, 16 from scarlet fever, 52 from

The 1602 deaths included 129 from measles, 16 from scarlet fever, 52 from diphtheria, 102 from whooping-cough, 5 from enteric fever, 7 from diarrhæa and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 311 deaths were referred to these diseases,

being 123 above the corrected average weekly number.

The deaths from measles, which had been 128, 152, and 137 in the preceding three weeks, further fell last week to 129, but were 76 above the corrected average; 15 cases belonged to Islington, 11 to St. Marylebone, 9 to Shoreditch, 8 to Fulham, 8 to Wandsworth, 7 to Paddington, 7 to Bethnal Green, 7 to Camberwell, and 7. to Greenwich sanitary areas. The deaths from scarlet fever, which had been 20, 15, and 21 in the preceding three weeks, fell again last week to 16, the corrected average being 14; 2 cases belonged to Fulham, 2 to Mile End Old Town, 2 to Lambeth, 2 to Battersea, and 2 to Wandsworth sanitary areas. The deaths from diphtheria, which had been 48, 46, and 45 in the preceding three weeks, rose last week to 52, exceeding the corrected average by 23; 6 cases belonged to St. Pancras, 6 to Islington, 6 to Camberwell, and 4 to Greenwich sanitary areas. The deaths from whooping-cough, which had been 67, 85, and 110 in the preceding three weeks, fell again last week to 102, but were 32 in excess of the corrected average; 12 cases belonged to Wandsworth, 9 to Islington, 9 to Hackney, 8 to Shoreditch, and 7 to Bethnal Green sanitary areas. The fatal cases of enteric fever, which had been 8, 7, and 10 in the preceding three weeks, were 5 last week, the corrected average being 8. The deaths from diarrhea, which had been 15, 9, and 10 in the preceding three weeks, fell again last week to 7, and were 6 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 404, 433, and 377 in the preceding three weeks, further fell last week to 345, and were

172 below the corrected average.

The deaths attributed directly to influenza numbered 11, having been 17, 15, and

18 in the preceding three weeks.

Different forms of violence caused 57 deaths, concerning all but 2 of which inquests were held. Of these 57 deaths, 7 were cases of suicide, while the remaining 50 were attributed to accident or negligence. Eight of these were referred to vehicles in the streets, 4 to drowning, one to the effects of an anæsthetic administered for surgical purposes, and 12 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 43 cases of small-pox, 2773 of scarlet fever, 706 of diphtheria, and 78 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 9 cases, against 1, 13, and 4; of scarlet fever, 277 cases, against 244, 244, and 217, of diphtheria, 117 cases, against 97, 70, and 102; and of enteric fever, 13 cases, against 7, 4, and 6.

GREATER LONDON.

In Greater London 3373 births and 2042 deaths were registered, corresponding to annual rates of 28.6 and 17.3 per 1000 of the estimated population. In the Outer Ring, 36 deaths from measles, 6 from scarlet fever, 8 from diphtheria, 14 from whooping-cough, 11 from "fever," and 2 from diarrhea were registered. Ten deaths from measles occurred in Hendon district, 6 in Barnet district, 6 in Edmonton district, and 4 in Croydon sub-district; 3 deaths from scarlet fever occurred in Canning Town sub-district, 5 from "fever" in West Ham district, and 4 in Edmonton district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.67 inches, and that of the Thermometer 45°.4, the latter being 3°.9 above the week's average in the 50 years 1841–90. The direction of the wind was South-Westerly, the horizontal movement of the air being 25 per cent. above the week's average in the 16 years 1860–75. The duration of registered bright sunshine in the week was 4.9 hours. The measured rainfall amounted to 1.16 inches.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

TABLE 9.-METEOROLOGICAL OBSERVATIONS taken at the ROTAL OBSERVATORY, GREENWICH, during the Week ending Saturday, 21ST MARCH, 1896, Under the Superintendence of the Astronomer Boyal. T

80.10 3.5 3.8 1.0 0.7 The results apply to the civil day, or from midnight to midnight. The height of the cistern of the barometer is 159 feet above the mean level of the sea; no of the dry bulb thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily walue of temperature of the air (column 8). The mean daily deep point temperature and degree of numidity are deduced from the mean daily values of the dry and wet bulb thermometers by Glaisher's Hygre. 222 symbols employed are :-P. positive; N. negative; w. weak; m. moderate; s. strong; and v. variable. Observations are usually taken at th. A.M.; noon; Sh. P.M.; and Sh. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records mad, during the twenty years ending 1973 for the barometer, and 26 With the corrected mean reading The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 50 years ending 1890, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875. In reading the columns 9 and 24 it will be borne in mind that + indicates "higher," and -"lower," than the average.

The values given in column 17 are not corrected for the index error of the thermometer, The numbers in column 28, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day. The reading of the week The reading of the week 29.75 in. by 10h. A.M. on the 15th; decreased to 29.57 by 9h. A.M. on the 16th; increased to 29.51 by 9h. No. 13. 1896. Vol. LVII.]

WEEK ENDING SATURDAY, MARCH 28.

[Price $1\frac{1}{2}d$.

General Register Office, Somerset House, March 30th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.8 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	Weeks	ending		1	Weeks	ending	5
Towns.	Mar. Mar. 7. 14.	Mar. Mar. 21. 28.	Towns.	Mar. 7.	Mar. 14.	Mar. 21.	Mar. 28.

The highest annual death-rates per 1000 living, as measured by last week's mortality, were: - from measles, 1.2 in Birmingham, 1.4 in Norwich, 1.6 in London and in Leicester, 1.7 in Newcastle-on-Tyne, 2.0 in Bristol, in Manchester, and in Salford, 3.7 in Sunderland, 4.0 in Oldham, and 9.5 in Birkenhead; from scarlet fever, 1.7 in Bolton; and from whooping-cough, 1.0 in London and in West Ham, 1.1 in Swausea, in Birmingham, in Sunderland. and in Gateshead, 1:3 in Cardiff, 1:5 in Derby, 1.6 in Leicester, and 1.7 in Salford and in Sheffield. In no case did the death-rate from "fever" or from diarrheea reach 1.0 per 1000 in any of the thirty-three towns. The 87 deaths from diphtheria included 51 in London, 5 in Birmingham, 3 in West Ham, 3 in Bristol, 3 in Liverpool. 3 in Manchester, 3 in Leeds, and 3 in Hull. One death from small-pox was registered in Bradford, but not one in any other of the thirty-three towns.

LONDON.

In London† 2780 BIRTHS and 1526 DEATHS were registered. Allowing for increase of population, the births were 35 above, and the deaths 252 below, the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses. Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

N

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 21·7, 20·6, and 18·8 in the preceding three weeks, further fell last week to 17·9. During the four weeks ending on Saturday last the death-rate averaged 19·8 per 1000, being 2·9 per 1000 below the mean rate in the corresponding periods of the ten years 1886–95.

The 1526 deaths included 134 from measles, 17 from scarlet fever, 51 from

The 1526 deaths included 134 from measles, 17 from scarlet fever, 51 from diphtheria, 89 from whooping-cough, 6 from enteric fever, 7 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 304 deaths were referred to these diseases,

being 105 above the corrected average weekly number.

The deaths from measles, which had been 152, 137, and 129 in the preceding three weeks, rose again last week to 134, exceeding the corrected average by 76; 16 cases belonged to Islington, 11 to Lambeth, 10 to St. Marylebone, 8 to Kensington, 8 to Greenwich, 6 to Paddington, 6 to Shoreditch, and 6 to Camberwell sanitary areas. The deaths from scarlet fever, which had been 15, 21, and 16 in the preceding three weeks, were 17 last week, this number being also the corrected average. The deaths from diphtheria, which had been 46, 45, and 52 in the preceding three weeks, were 51 last week, exceeding the corrected average by 25; 7 cases belonged to Islington, 5 to Camberwell, 4 to Greenwich, 3 to St. George-in-the-East, 3 to Limehouse, and 3 to Lewisham sanitary areas. The deaths from whooping-cough, which had been 85, 110, and 102 in the preceding three weeks, further fell last week to 89, but were 13 above the corrected average; 11 cases belonged to Poplar, 10 to Bethnal Green, 8 to Islington, 6 to Chelsea, and 6 to Greenwich sanitary areas. The fatal cases of enteric fever, which had been 7, 10, and 5 in the preceding three weeks, were 6 last week, the corrected average being 8. The deaths from diarrhæa, which had been 9, 10, and 7 in the preceding three weeks, were again 7 last week, the corrected average being 12.

last week, the corrected average being 12.

The deaths referred to diseases of the respiratory organs, which had been 433, 377, and 345 in the preceding three weeks, further fell last week to 285, and were

166 below the corrected average.

The deaths attributed directly to influenza numbered 12, having been 15, 18, and

11 in the preceding three weeks.

Different forms of violence caused 59 deaths, concerning all but one of which inquests were held. Of these 59 deaths, 9 were cases of suicide, and 2 of homicide, while the remaining 48 were attributed to accident or negligence. Five of these were referred to vehicles in the streets, one to a conflagration, and 10 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 33 cases of small-pox, 2744 of scarlet fever, 705 of diphtheria, and 72 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 2 cases, against 13, 4, and 9; of scarlet fever, 224 cases, against 244, 217, and 277; of diphtheria, 105 cases, against 70, 102, and 117; and of enteric fever, 8 cases, against 4, 6, and 13.

GREATER LONDON.

In Greater London 3755 births and 1933 deaths were registered, corresponding to annual rates of 31.8 and 16.4 per 1000 of the estimated population. In the Outer Ring, 30 deaths from measles, 3 from scarlet fever, 11 from diphtheria, 25 from whooping-cough, 3 from "fever," and 6 from diarrheea were registered. Thirteen deaths from measles occurred in Willesden sub-district and 4 in Edmonton sub-district; 4 deaths from diphtheria and 11 from whooping-cough occurred in West Ham district; 3 deaths from "fever" occurred in Edmonton district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.67 inches, and that of the Thermometer 49°·1, the latter being 6°·6 above the week's average in the 50 years 1841–90. The direction of the wind was Westerly, the horizontal movement of the air being 8 per cent. above the week's average in the 16 years 1860–75. The duration of registered bright sunshine in the week was 28·0 hours. The measured rainfall amounted to 0·40 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

WEEKLY RETURN

LONDON DEATHS BIRTHS AND IN

AND TH

OTHER QREAT TOWNS. THIRTY-TWO

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office. AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 14. 1896. Vol. LVII.

WEEK ENDING SATURDAY, APRIL 4.

Price 11d.

General Register Office, Somerset House, April 7th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.3 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	Weeks ending					Weeks ending

Leeds - Leicester -				20·5 16·0	Wolverhampton -	10 1	200	

The highest annual death-rates per 1000 living, as measured by last week's mortality, were :- from measles, 1.0 in Birmingham and in Salford, 1.2 in Liverpool, in Blackburn, and in Newcastle-on-Tyne, 1.3 in Croydon, 1.4 in Bristol, 1.5 in London and in Oldham, 1·7 in Plymouth, 2·0 in Burnley, 2·4 in Manchester, 4·5 in Sunderland, and 6·2 in Birkenhead; from scarlet fever, 1·3 in Bolton; from whooping-cough, 1·0 in Cardiff, in Birkenhead, and in Salford, 1·1 in Gateshead, 1·2 in London and in Plymouth, 1·4 in Sheffield, 1·5 in Birmingham, and 1.9 in Leeds; from "fever," 1.2 in Blackburn and 1.4 in Norwich; and from diarrhæa, 1.1 in Gateshead. The 68 deaths from diphtheria included 45 in London, 5 in Birmingham, 4 in West Ham, and 3 in Liverpool. No death from small-pox was registered in any of the thirty-three towns.

LONDON.

In London† 2629 BIRTHS and 1522 DEATHS were registered. Allowing for increase of population, the births were 123, and the deaths 167, below the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated to utside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 20.6, 18.8, and 17.9 in the preceding three weeks, was again 17.9 last week. During the four weeks ending on Saturday last the death-rate averaged 18.8 per 1000, being 2.8 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1522 deaths included 128 from measles, 27 from scarlet fever, 45 from

The 1522 deaths included 128 from measles, 27 from searlet fever, 45 from diphtheria, 99 from whooping-cough, 6 from enteric fever, 7 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 312 deaths were referred to these diseases,

being 120 above the corrected average weekly number.

The deaths from measles, which had been 137, 129, and 134 in the preceding three weeks, fell again last week to 128, but were 70 above the corrected average; 11 cases belonged to Kensington, 10 to Islington, 10 to Bethnal Green, 10 to Greenwich, 9 to St. Marylebone, 8 to Chelsea, and 6 to Paddington sanitary areas. The deaths from scarlet fever, which had been 21, 16, and 17 in the preceding three weeks, rose last week to 27, exceeding the corrected average by 12; 3 cases belonged to Greenwich, 2 to Westminster, and 2 to Stoke Newington sanitary areas. The deaths from diphtheria, which had been 45, 52, and 51 in the preceding three weeks, fell last week to 45, but were 16 above the corrected average; 5 cases belonged to St. Pancras, 5 to Islington, 4 to Fulham, and 4 to Limehouse sanitary areas. The deaths from whooping-cough, which had been 110, 102, and 89 in the preceding three weeks, rose again last week to 99, exceeding the corrected average by 33; 14 cases belonged to Islington, 12 to Camberwell, 8 to Shoreditch, 8 to Bermondsey, 7 to Poplar, 7 to Bethnal Green, and 6 to Hackney sanitary areas. The fatal cases of enteric fever, which had been 10, 5, and 6 in the preceding three weeks, were again 6 last week, the corrected average being 8. The deaths from diarrhæa, which had been 10, 7, and 7 in the preceding three weeks, were again 7 last week, the corrected average being 14.

The deaths referred to diseases of the respiratory organs, which had been 377, 345, and 285 in the preceding three weeks, further fell last week to 270, and were

131 below the corrected average.

The deaths attributed directly to influenza numbered 13, having been 18, 11, and

12 in the preceding three weeks.

Different forms of violence caused 60 deaths, concerning all but one of which inquests were held. Of these 60 deaths, 6 were cases of suicide, while the remaining 54 were attributed to accident or negligence. Eleven of these were referred to vehicles in the streets, 5 to drowning, and 12 (including 10 of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 23 cases of small-pox, 2676 of scarlet fever, 686 of diphtheria, and 76 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 2 cases, against 4, 9, and 2; of scarlet fever, 186 cases, against 217, 277, and 224; of diphtheria, 82 cases, against 102, 117, and 105; and of enteric fever, 18 cases, against 6, 13, and 8.

GREATER LONDON.

In Greater London 3551 births and 1944 deaths were registered, corresponding to annual rates of 30°1 and 16°5 per 1000 of the estimated population. In the Outer Ring, 35 deaths from measles, 4 from scarlet fever, 7 from diphtheria, 26 from whooping-cough, 5 from "fever," and one from diarrhea were registered. Thirteen deaths from measles occurred in Willesden sub-district; 8 deaths from whooping-cough occurred in Edmonton district; 6 deaths from diphtheria, 9 from whooping-cough, and 3 from "fever" occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.92 inches, and that of the Thermometer 42°.2, the latter being 3°.1 below the week's average in the 50 years 1841-90. The direction of the wind was Northerly, the horizontal movement of the air being 6 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 12.5 hours. The measured rainfall amounted to 0.20 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

The height of the distern of the barometer is lay feet above the mean level of the sea; no	Consected has over appured to the resulting to reduce be sea theyel. Observations are usually taken as 60-h.a.m.; noon; 3h.p.m.; and 9h.p.m. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records mad during the twenty years ending 1878 for the barometer, and	during the twenty years adding 1888 for the thermometers. With the corrected mean reading for the day built thermometer is combined the corrected mean of the readings of the maximum and minimum thermometers, forming the mean daily value of the agreement of comperture of the agreement of the agr	(counting). The mean stands one points embedding the distinction the mean daily values of the dry and Web built thermometers by Gillshef's Hygrometrical labibles by Gillshef's Hygrometrical labibles. The average temperature of the air is that derived from a discussion of the homometrom.	made as Greenwich during the 50 years ending 1890, and that of horizontal movements of the sair from a discussion of the amenometric records for the 16 years ending 1875. In reading, the columns 9 and 24 it will be borne in mind that + indicates "kighter," and	the values given in column 17 are not corrected for the index. The values given in column 17 are not corrected for the index. This cannot be determined. This example of the value of the v	The supplyed are: -P. positive; N. negative; W. Weak; m. moderate; s. strong; and s. yarable. The numbers in column 28, derived from the Campbell-Stokes Sunshine Instrument show	the agreeate duration of Dright sunsitine on each day. The reading of the barometer increased from 29.44 in, at the beginning of the week. 30.04 in, by noon on the 31st of March (decreased to 29.88 by 9), and the control of the week.	increased to 30'03 in. by 11h, P.M. on the same day; decreased to 29'96 in. by 3h, P.M. on the 2nd; increased to 30'03 in. by 3h, A.M. on the 4th; and was 29'96 in. at the end of the

WEEKLY RETURN

LONDON DEATHS AND BIRTHS

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 15. 1896. Vol. LVII.

WEEK ENDING SATURDAY, APRIL 11.

Price 1 d.

General Register Office, Somerset House, April 13th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 20.0 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	Weeks ending		Weeks ending
Towns.	Mar. Mar. Apr. Apr. 21. 28. 4. 11.	Towns.	Mar. Mar. Apr. Apr. 21. 28. 4. 11.
Birkenhead Birmingham Blackburn - Bolton - Bradford - Brighton - Bristol - Burnley - Cardiff - Croydon - Derby - Gateshead - Halifax - Huddersfield Hull - Leeds - Leicester -	$ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	Norwich Nottingham - Oldham Plymouth Portsmouth - Preston Salford Sheffield Sunderland - Swansea West Ham Wolverhampton -	$\begin{array}{c ccccccccccccccccccccccccccccccccccc$

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1·2 in Liverpool and in Newcastle-on-Tyne, 1·3 in Croydon, 1·4 in Norwich, 1·7 in Manchester, 1·9 in London, 2·7 in Bristol, 3·6 in Oldham, 4.3 in Birkenhead, and 4.8 in Sunderland; from scarlet fever, 1.0 in Salford and 1.3 in Bolton; from whooping-cough, 1.0 in West Ham, 1.1 in Swansea and in Halifax, 1.2 in Birmingham and in Sheffield, 1.3 in Bolton, 1.4 in London, 1.7 in Salford, 1.8 in Leeds, and 2.0 in Derby; and from "fever," 1.8 in Wolverhampton. In no case did the death-rate from diarrhea reach 1.0 per 1000 in any of the thirty-three towns. The 76 deaths from diphtheria included 45 in London, 4 in Birmingham, 3 in West Ham, and 3 in Bolton. Two deaths from small-pox were registered in Bristol, but not one in any other of the thirty-three towns.

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

LONDON.

In London* 2677 births and 1727 deaths were registered. Allowing for increase of population, the births were 18 below, and the deaths 17 above, the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 18·8, 17·9, and 17·9 in the preceding three weeks, rose again last week to 20·3. During the four weeks ending on Saturday last the death-rate averaged 18·7 per 1000, being 1·9 per 1000 below the mean rate in the corresponding periods of the ten years 1886–95.

The 1727 deaths included 158 from measles, 10 from scarlet fever, 45 from

diphtheria, 116 from whooping-cough, 4 from enteric fever, 13 from diarrhea and dysentery, 1 from infantile cholera, and not one death from small-pox, from typhus, or from any ill-defined form of continued fever; thus, 347 deaths were referred to

these diseases, being 148 above the corrected average weekly number.

The deaths from measles, which had been 129, 134, and 128 in the preceding three weeks, rose again last week to 158, exceeding the corrected average by 97; 13 cases belonged to Greenwich, 11 to St. Marylebone, 11 to Islington, 10 to Battersea, 9 to Lambeth, 9 to Wandsworth, 7 to Paddington, 7 to Kensington, 7 to Chelsea, and 7 to Woolwich sanitary areas. The deaths from scarlet fever, which had been 16, 17, and 27 in the preceding three weeks, fell again last week to 10, and were 6 below the corrected average; 2 cases belonged to Poplar and 2 to Lambeth sanitary areas. The deaths from diphtheria, which had been 52, 51, and 45 in the preceding three weeks, were again 45 last week, exceeding the corrected average by 14; 6 cases belonged to Islington and 5 to St. Pancras sanitary areas. The deaths from whooping-cough, which had been 102, 89, and 99 in the preceding three weeks, further rose last week to 116, exceeding the corrected average by 48; 15 cases belonged to Bethnal Green, 11 to Islington, 8 to Hackney, 8 to Camberwell, 7 to Battersea, and 7 to Wandsworth sanitary areas. The fatal cases of enteric fever, which had been 5, 6, and 6 in the preceding three weeks, were 4 last week, the corrected average being 7. The deaths from diarrhæa, which had been 7 in each of the preceding three weeks, rose last week to 13, but were 2 below the corrected average. The death, in the London Hospital, of a man aged 54 years, was certified after inquest to be due to hydrophobia.

The deaths referred to diseases of the respiratory organs, which had been 345, 285, and 270 in the preceding three weeks, rose again last week to 301, but were

102 below the corrected average.

The deaths attributed directly to influenza numbered 16, having been 11, 12, and

13 in the preceding three weeks.

Different forms of violence caused 68 deaths, concerning all but 1 of which inquests were held. Of these 68 deaths, 9 were cases of suicide, while the remaining 59 were attributed to accident or negligence. Three of these were referred to vehicles in the streets, 3 to drowning, and 17 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.†

According to returns from the Metropolitan Asylum and London Fever Hospitals and from the Highgate Small-pox Hospital, there were 21 cases of small-pox, 2587 of scarlet fever, 696 of diphtheria, and 71 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 5 cases, against 9, 2, and 2; of scarlet fever, 226 cases, against 277, 224, and 186; of diphtheria, 78 cases, against 117, 105, and 82; and of enteric fever, 8 cases, against 13, 8, and 18.

^{*} Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, 1 The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

DEATHS BELONGING to the SEVERAL SANITARY AREAS OF REGISTRATION LONDON registered in the 13 WEEKS ENDING on 28th March, 1896.

In the above Table all deaths of persons in, or on the way to, Hospitals and other Public Institutions, as well as those of persons under treatment in surgical homes, or dying by accident or otherwise in the streets, have been distributed, as far as practicable, to the samtary areas in which the deceased had previously resided. The deaths of 442 London residents who died outside Registration London in the Strand Union Workhouse at Mitcham, the City of London Lunatic Asylum at Stone, and the Metropolitan Hospitals and Asylums have been similarly distributed. In 386 cases the previous residence was outside Registration London, and these have been excluded from the Table.

GREATER LONDON.

In Greater London 3582 births and 2154 deaths were registered, corresponding to annual rates of 30.4 and 18.3 per 1000 of the estimated population. In the Outer Ring, 45 deaths from measles, 2 from scarlet fever, 14 from diphtheria, 15 from whooping-cough, 2 from "fever," and 5 from diarrhea were registered. Seventeen deaths from measles occurred in Willesden sub-district, 5 in Bexley sub-district, and 7 in Edmonton district; 8 deaths from diphtheria and 9 from whooping-cough occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30.01 inches, and that of the Thermometer 51°.2, the latter being 5°.4 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 12 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 5.8 hours. The measured rainfall amounted to 0.15 of an inch.

RETURNS OF LONDON WATER COMPANIES.

The London Water Companies have been good enough to furnish the following account of the number of services and the average daily amount of water supplied during the month of March 1896. The supply was in the ratio of 235 gallons to one service.

Committee	Number o	f Services.	Daily Suppl in Gal	
Companies.	MARCH.	MARCH.	MARCH.	MARCH.
	1895.	1896.	1895.	1896.

Note.—The Return for March 1896, as compared with that for the corresponding month of 1895, shows an increase of 13,702 services and a decrease of 35,208,883 gallons of water supplied daily.

Analysis of Metropolitan Water Supply during March, 1896.

Water-analysis Laboratory, The Yews, Reigate, 31st March, 1896.

SIR,

I HAVE to report to you the results of the chemical analysis, and of the physical and bacterioscopic examination, of the waters supplied to the inner, and portions of the outer, circle

of the Metropolis during the month of March.

At the request of the Associated Metropolitan Water Companies, I have extended these monthly examinations to (a) the chemical and bacterioscopic condition of the raw river water at the intakes of the various Companies, and (b) to the bacteriology of the water as it issues from the filter beds of each Company, and before it is pumped into the distributing mains.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Taking the average amount of organic impurity in a given volume of the Kent Company's water during nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Kent 0.7, New River and Tottenham 1.2, East London (deep-well) 1.3, Chelsea 2.5, East London (river supply) 2.6, West Middlesex 2.9, Colne Valley 3.3, Lambeth 3.4, and Southwark and Grand Junction 3.5. The unfiltered river waters contained the following proportions:—Thames at Hampton 6.3, New River Cut 3.4, and the Lea at Angel Road 5.7.

The Thames at Hampton was, on Match 10th, turbid and yellow in colour. It was both chemically and bacterially of inferior quality, but by 13 days storage the Chelsea Company were enabled to supply their filters with raw water containing only one seventy-fifth of the number of microbes present in the unstored river water; whilst the Grand Junction Company, by a preliminary filtration, reduced the number to nearly one-fortieth. As delivered by the five Companies drawing from this river the water was, in every case, efficiently filtered, and, with three exceptions, of most excellent bacterial quality. The bacterial improvement effected by the various Companies is expressed by the following per-centage numbers:—Chelsea 99.84, West Middlesex 99.87, Southwark (No. 3 filter) 99.44, (No. 8 filter) 99.42, Grand Junction (general well at Hampton) 98.67, (general well at Kew) 99.84, (South filter well at Kew) 99.87, and Lambeth 99.78.

The New River Cut, before entering the subsidence and storage reservoirs, was, on March 12th, turbid and pale yellow in colour. It was of excellent chemical, but rather bad bacterial quality. By passing through two storage reservoirs, the number of bacteria per c.c. was reduced to nearly one-third of the original amount, and, after efficient filtration, the water was delivered in most excellent chemical and bacterial condition. Bacterially, it was improved before delivery to the extent represented by the following percentage numbers:—General filter well 99·72, No. 2 filter well 99·72, and No. 5 filter well 99·81. The water, taken from the Lea at Angel Road by the East London Company on the 12th of March, was turbid and yellow in colour. It was chemically somewhat better than, but bacterially inferior to, the Thames at Hampton. By 15 days storage, the number of bacteria per c.c. was reduced to less than one-fourteenth of the original amount, and, after efficient filtration, this water was delivered to consumers, of excellent chemical and bacterial quality. The bacterial improvement was represented by the following percentage numbers:—No. 1 Essex well 99·81, No. 2 Essex well 99·73, and Middlesex well 99·75.

The deep-well waters of the Kent and East London Companies, and of the Tottenham Local Board of Health were of most excellent chemical quality, but that delivered by the East London Company was very slightly turbid, whilst the water from the Colne Valley Company's well contained an unusually large amount of vegetable organic matter, it was, however, softened before delivery and thus rendered suitable for washing.*

Seen through a stratum two feet deep, the Kent, Colne Valley, and Tottenham waters were clear and colourless, the East London Company's deep-well water very slightly turbid and colourless, the New River clear and nearly colourless, the East London and the waters derived from the Thames clear and very pale yellow.

The bacterioscopic examination of the raw river waters before and after storage, and preliminary filtration, and of the supplies delivered by the various Companies and collected on the 10th, 11th, 12th, and 13th of March yielded the results contained in the following table:—

DESCRIPTION.	Microbes per c.c.	Temp. C.
RAW AND STORED RIVER WATERS. Thames at Hampton, March 10th "after storage for 13 days (Chelsea Company), March 10th "6 days (Lambeth Company), March 10th West Middlesex Company's water passing on to filters 1-5, March 11th Grand Junction Company's water arriving at Kew from Hampton, after preliminary filtration, March 11th "at Kew passing to filters 2, 3, 4, 5, and 6, March 11th New River Cut before passing through reservoirs, March 12th "between the two reservoirs, March 12th "after passing through reservoirs, March 12th Lea water at Angel Road (East London Company), March 12th "after storage for 15 days, March 12th "after storage for 15 days, March 12th	18,000 240 5,120 2,340 460 300 4,240 2,360 1,820 20,640 1,460	8°7 7'44 8'4 7'9 9'5 9'0 9'7 9'4 9'2 9'8 8'4

Dr. Hill, F.I.C., Medical Officer of Health for Birmingham, reports that the water supplied to that city was "almost clear and pale green in a two-foot tube.

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College, reports that the water supplied to that city from Loch Katrine was "light brown in colour, and contained a "little suspended matter."

The Registrar General, &c. &c.

I am, &c. E. Frankland.

^{*} The Secretary informs me that extensive enlargement works are now being carried out upon the Company's premises at Bushey.

* Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the City. † Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5, 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the waters. The Table is to be read thus:—the Grand Junction Company's intake at Hampton, collected on the 10th of March 1896, had a temperature of 8°·7 C.; 100,000 lbs. of it contained 30·28 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained 310 lb. of carbon and '060 lb. of nitrogen. The above quantity of water also contained '018 lb. of cambonia and '243 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was '318 lb. The above weight of water also contained 1.8 lb. of chlorine and 19·4 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by mulipplying them by 7, and then moving the decimal point one place to the left. The same operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

The height of the custern of the baronneder is buy less above one mean level of the sees, no correction has been applied to the readings to reduce to sea level. Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 8h. P.M. The means of the experentialings of the baronneder, the baronneder, and the week bulb thermometer, and the week bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion	of the photographic records mad, during the twenty years ending 1873 for the barometer, and during the twenty years welling 1886 for the thermometers. With the corrected mean reading of the dry built these welly goes to conclude the corrected mean of the readings of the maximum	and minimum thermometers, forming the mean daily value of femperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced from the mean daily values of the dry and wet builb thermometers by Glaisher's Hygrometrical Tables.	The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 50 years ending 1896, and that of horizontal movement of the air from a discussion of the amenometry records for the 16 years ending 1875.	in resting the columns 9 and 24 in will be borne in mind that + indicates "higher," and -"lower," than the average. The values given in column 17 are not corrected for the index error of the thermometer,	which cannot be determined. The record of Electronity is derived from Thomson's self-registering Electrometer. The symbols employed are:—P. positive; N. negative; w. weak; m. moderate; s. strong; and x. variable.	The numbers in column 28, derived from the Campbell-Stokes Sunshine Instrument, show the aggregate duration of bright sunshine on each day.

WEEKLY RETURN

LONDON BIRTHS AND DEATHS IN

OTHER QREAT TOWNS. THIRTY-TWO

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 16. 1896. Vol. LVII,

WEEK ENDING SATURDAY, APRIL 18.

[Price 1 d.

General Register Office, Somerset House, April 20th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 19.0 per 1000 of their aggregate copulation, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphapetically arranged, corresponded to the following annual rates per 1000:-

		Weeks	ending	" and	Weeks ending
Towns.	Mar. 28.	Apr.	Apr. 11.	Apr. 18.	Towns. Mar. Apr. Apr. Apr. 28. 4. 11. 18.

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Burnley, 1.1 in Nottingham, 1.2 in Manchester, 1.5 in Salford, 1.6 in Birmingham, 1.7 in London and in Plymouth, 1.9 in Norwich, 2.2 in Oldham, 2.6 in Sunderland, and 6.2 in Birkenhead; from whooping-cough, 1.0 in West Ham, in Mauchester, and in Salford, 1.1 in Bradford, 1.3 in Cardiff, 1.4 in London, 1.8 in Birmingham, 2.0 in Derby, and 2.6 in Bolton; from "fever," 1.0 in Salford and 1.2 in Wolverhampton; and from diarrhæa, 1.6 in Graterland. in Gateshead. The death-rate from scarlet fever did not reach 1.0 per 1000 in any of the thirty-three towns. The 66 deaths from diphtheria included 42 in London, 8 in Birmingham, 4 in West Ham, and 3 in Manchester. One death from smallpox were registered in Leeds, but not one in any other of the thirty-three towns.

LONDON.

In London† 2836 births and 1654 deaths were registered. Allowing for increase of population, the births were 87 above, and the deaths 27 below, the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated entitled Registration London, but excluding deaths of persons not belonging to London occurring in the unside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 17.9, 17.9, and 20.3 in the preceding three weeks, fell again last week to 19.4. During the four weeks ending on Saturday last the death-rate averaged 18.9 per 1000, being 1.3 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1654 deaths included 145 from measles, 11 from scarlet fever, 42 from

The 1654 deaths included 145 from measles, 11 from scarlet fever, 42 from diphtheria, 117 from whooping-cough, 6 from enteric fever, 1 from an ill-defined form of continued fever, 16 from diarrhea and dysentery, and not one death from small-pox, from typhus, or from cholera; thus, 338 deaths were referred to these

diseases, being 127 above the corrected average weekly number.

The deaths from measles, which had been 134, 128, and 158 in the preceding three weeks, fell again last week to 145, but were 73 above the corrected average; 15 cases belonged to Greenwich, 12 to Wandsworth, 10 to Chelsea, 9 to Kensington, 8 to Hackney, and 8 to Woolwich sanitary areas. The deaths from scarlet fever, which had been 17, 27, and 10 in the preceding three weeks, were 11 last week, the corrected average being 16. The deaths from diphtheria, which had been 51, 45, and 45 in the preceding three weeks, fell last week to 42, but exceeded the corrected average by 14; 5 cases belonged to Mile End Old Town, 4 to Camberwell, 3 to Islington, 3 to Hackney, 3 to St. Luke, and 3 to Lambeth sanitary areas. The deaths from whooping-cough, which had been 89, 99, and 116 in the preceding three weeks, were 117 last week, the corrected average being 70; 9 cases belonged to Hackney, 9 to Bermondsey, 8 to Bethnal Green, 8 to Poplar, 8 to Battersea, 8 to Wandsworth, 7 to Islington, 7 to Lambeth, and 7 to Camberwell sanitary areas. The fatal cases of enteric fever, which had been 6, 6, and 4 in the preceding three weeks, rose again last week to 6, the corrected average being 8. The deaths from diarrhæa, which had been 7, 7, and 13 in the preceding three weeks, further rose last week to 16, the corrected average being 15.

The deaths referred to diseases of the respiratory organs, which had been 285, 270, and 301 in the preceding three weeks, further rose last week to 328, but were

56 below the corrected average.

The deaths attributed directly to influenza numbered 9, having been 12, 13, and

16 in the preceding three weeks.

Different forms of violence caused 56 deaths, concerning all of which inquests were held. Of these 56 deaths, 12 were cases of suicide, and 4 of homicide, while the remaining 40 were attributed to accident or negligence. Five of these were referred to vehicles in the streets, 6 to drowning, and 7 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 16 cases of small-pox, 2527 of scarlet fever, 671 of diphtheria, and 77 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 4 cases, against 2, 2, and 5; of scarlet fever, 201 cases, against 224, 186, and 226; of diphtheria, 90 cases, against 105, 82, and 78; and of enteric fever, 16 cases, against 8, 18, and 8.

GREATER LONDON.

In Greater London 3877 births and 2097 deaths were registered, corresponding to annual rates of 32.9 and 17.8 per 1000 of the estimated population. In the Outer Ring, 42 deaths from measles, 3 from scarlet fever, 20 from diphtheria, 18 from whooping-cough, 2 from "fever," and 1 from diarrhea were registered. Nine deaths from measles occurred in Willesden sub-district, and 8 in Tottenham sub-district; 10 deaths from diphtheria and 11 from whooping-cough occurred in West Ham district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.96 inches, and that of the Thermometer 45°.8, the latter being 1°.1 below the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 3 per cent above the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 16.8 hours. The measured rainfall amounted to 0.25 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

\$ (D)			_		-	-		-	-										

The numbers in this column are the average weekly Deaths for the ten years 1886-95, raised by 5.541 per cent for increase of population. Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical med. When medical statement on the case of death is not certified by a registered stitioner, the case is returned under the heading. "no statement." The evidence at inquests is often insufficient to enable the Coroner to certify whether a violent death be the result of accident, murder, uslaughter, or suicide. All such cases are classed under "accident."

A 91700.-3.

WEEK ENDING SATURDAY, APRIL 25.

Price 1 d.

General Register Office, Somerset House, April 27th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 19.5 per 1000 of their aggregate population, which is estimated * at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

	W	7eeks e	ending			A - 17 18 19		Weeks	ending	3

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Norwich, in Burnley, in Huddersfield, and in Newcastle-on-Tyne, 1.1 in Bristol, 1.5 in Portsmouth and in Sheffield, 1.8 in Croydon, 2.0 in London, 2.9 in Oldham, 3.1 in Manchester, 4.3 in Birkenhead, and 4.8 in Sunderland; from whooping-cough, 1.0 in Salford, 1.1 in Birmingham, in Sunderland, and in Gateshead, 1.2 in Wolverhampton and in Newcastle-on-Tyne, 1.3 in Croydon and in Liverpool, 1.6 in London, 1.8 in Manchester, and 2.2 in Bolton; from "fever," 1.6 in Swansea; and from diarrhea, 1.2 in Blackburn. In no case did the death-rate from scarlet fever reach 1.0 per 1000 in any of the thirty-three towns. The 64 deaths from diphtheria included 41 in London, 5 in Birmingham, 3 in Liverpool, 3 in Manchester, and 3 in Leeds. One death from small-pox was registered in Bristol, but not one in any other of the thirty-three towns.

LONDON.

In London† 2743 BIRTHS and 1641 DEATHS were registered. Allowing for increase of population, the births were 47 above, and the deaths 12 below, the average

[•] By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1801 had been maintained since the letter date.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far at Wandsworth, and in the Metropolitan Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 17.9, 20.3, and 19.4 in the preceding three weeks, further fell last week to 19.3. During the four weeks ending on Saturday last the death-rate averaged 19.2 per 1000, being 0.6 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1641 deaths included 170 from measles, 13 from scarlet fever, 41 from diphtheria, 134 from whooping-cough, 6 from enteric fever, 3 from diarrheea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 367 deaths were referred to these diseases,

being 155 above the corrected average weekly number.

The deaths from measles, which had been 128, 158, and 145 in the preceding three weeks, rose again last week to 170, exceeding the corrected average by 99; 17 cases belonged to Greenwich, 14 to Chelsea, 13 to Poplar, 13 to Battersea, 12 to Kensington, and 11 to Wandsworth sanitary areas. The deaths from searlet fever, which had been 27, 10, and 11 in the preceding three weeks, were 13 last week, the corrected average being 16; 2 cases belonged to Greenwich and 2 to Plumstead sanitary areas. The deaths from diphtheria, which had been 45, 45, and 42 in the preceding three weeks, were 41 last week, exceeding the corrected average by 11; 5 cases belonged to Poplar, 4 to Greenwich, 3 to Marylebone, and 3 to Islington sanitary areas. The deaths from whooping-cough, which had been 99, 116, and 117 in the preceding three weeks, further rose last week to 134, exceeding the corrected average by 62; 15 cases belonged to Wandsworth, 13 to Islington, 10 to Bethnal Green, 9 to Camberwell, and 8 to Lambeth sanitary areas. The fatal cases of enteric fever, which had been 6, 4, and 6 in the preceding three weeks, were again 6 last week, the corrected average being 7. The deaths from diarrhea, which had been 7, 13, and 16 in the preceding three weeks, fell again last week to 3, the corrected average being 14.

The deaths referred to diseases of the respiratory organs, which had been 270, 301, and 328 in the preceding three weeks, fell again last week to 287, and were

79 below the corrected average.

The deaths attributed directly to influenza numbered 14, having been 13, 16, and

9 in the preceding three weeks.

Different forms of violence caused 63 deaths, concerning all of which inquests were held. Of these 63 deaths, 8 were cases of suicide, and 1 of homicide, while the remaining 54 were attributed to accident or negligence. Three of these were referred to vehicles in the streets, 5 to drowning, and 14 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 16 cases of small-pox, 2534 of scarlet fever, 692 of diphtheria, and 75 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 8 cases, against 2, 5, and 4; of scarlet fever, 236 cases, against 186, 226, and 201; of diphtheria, 99 cases, against 82, 78, and 90; and of enteric fever, 12 cases, against 18, 8, and 16.

GREATER LONDON.

In Greater London 3788 births and 2091 deaths were registered, corresponding to annual rates of 32·1 and 17·7 per 1000 of the estimated population. In the Outer Ring, 41 deaths from measles, 6 from scarlet fever, 6 from diphtheria, 36 from whooping-cough, 1 from "fever," and 6 from diarrhoea were registered. Seven deaths from measles occurred in Willesden sub-district, 7 in Walthamstow sub-district, 5 in Tottenham sub-district, and 4 in Croydon sub-district; 3 deaths from scarlet fever occurred in West Ham district; 18 deaths from whooping-cough occurred in West Ham district, and 4 in Willesden sub-district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30·13 inches, and that of the Thermometer 49°·0, the latter being 0°·5 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 33 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 20·4 hours. No rain was measured during the week.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox. Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

The numbers in this column are the average weekly Deaths for the ten years 1886-95, raised by 5°541 per cent for increase of population.

Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical mea. When medical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered attendant does not certify the transfer of the case is returned under the heading "no statement."

The originate at inquests is often insufficient to cashe the Coroner to certify whether a violent death be the result of accident, murder, as all and the cases are classed under "accident."

WEEKLY RETURN

LONDON AND DEATHS IN BIRTHS

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.O.

No. 18. 1896. Vol. LVII.

WEEK ENDING SATURDAY, MAY 2.

Price $1 \frac{1}{3} d$.

General Register Office, Somerset House, May 4th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.4 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

Birkenhead 17.6 21.0 21.9 18.6 Eliverpool - 21.6 22.0 23.3 19.5 19.5 19.7 16.9 18.6 19.6 16.9 16.2 13.9 13.6 17.4 16.5 19.7 16.5 19.6 17.4 16.5 19.7 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 16.5 19.6 17.4 18.5 17.2 17.2 17.5 19.6 17.5 17.5			Weeks	ending				Weeks	ending

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Leicester and in Huddersfield, 1.1 in Gateshead, 1.4 in Birkenhead and in Sheffield, 1.5 in Salford and in Newcastle-on-Tyne, 1.8 in London and in Bristol, 2.0 in Manchester, 2.2 in Croydon, 4.0 in Oldham, and 4.5 in Sunderland; from scarlet fever, 1.2 in Salford; from whooping-cough, 1.0 in Cardiff, in Derby, and in Newcastle-on-Tyne, 1.1 in Swansea, in Halifax, and in Gateshead, 1.2 in Portsmouth, 1.3 in London and in Manchester, 1.4 in Bradford, 1.5 in Salford, 1.7 in Bolton, and 1.8 in Croydon; and from "fever," 1.1 in Halifax. The 67 deaths from diphtheria included 36 in London, 5 in Liverpool, 4 in West Ham, 4 in Birmingham, 3 in Hull, and 3 in Newcastle-on-Tyne. Two deaths from small-pox were registered belonging to London, and one to West Ham, but not one belonging to any other of the thirty-three towns.

In the registration district of Gloucester, 24 deaths from small-pox were registered last week, 23 of the deceased persons being residents of Gloucester municipal

borough.

LONDON.

In London† 2565 births and 1570 deaths were registered. Allowing for increase of population, the births were 260, and the deaths 54, below the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7 added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 20·3, 19·4, and 19·3 in the preceding three weeks, further fell last week to 18·5. During the four weeks ending on Saturday last the death-rate averaged 19·4 per 1000, being 0·2 per 1000 below the mean rate in the corresponding periods of the ten years 1886–95.

The 1570 deaths included 2 from small-pox, 152 from measles, 10 from scarlet fever, 36 from diphtheria, 114 from whooping-cough, 10 from enteric fever, 12 from diarrhæa and dysentery, and not one death from typhus, from any ill-defined form of continued fever, or from cholera; thus, 336 deaths were referred to these diseases,

being 120 above the corrected average weekly number.

The 2 fatal cases of small-pox belonged to Holborn and Newington sanitary areas respectively. The deaths from measles, which had been 158, 145, and 170 in the preceding three weeks, fell again last week to 152, but were 82 above the corrected average; 13 cases belonged to Woolwich, 12 to Poplar, 12 to Battersea, 11 to Wandsworth, 11 to Greenwich, 10 to Chelsea, 8 to Kensington, and 8 to St. Marylebone sanitary areas. The deaths from scarlet fever, which had been 10, 11, and 13 in the preceding three weeks, fell again last week to 10, and were 8 below the corrected average; 2 cases belonged to Fulham and 2 to St. Marylebone sanitary areas. The deaths from diphtheria, which had been 45, 42, and 41 in the preceding three weeks, further fell last week to 36, but were 7 above the corrected average; 4 cases belonged to Islington, 4 to Mile End Old Town, and 4 to Greenwich sanitary areas. The deaths from whooping-cough, which had been 116, 117, and 134 in the preceding three weeks, fell again last week to 114, but were 44 above the corrected average; 9 cases belonged to Poplar, 8 to Islington, 8 to Lambeth, and 7 to Wandsworth sanitary areas. The fatal cases of enteric fever, which had been 4, 6, and 6 in the preceding three weeks, rose last week to 10, the corrected average being 9. The deaths from diarrhæa, which had been 13, 16, and 3 in the preceding three weeks, rose again last week to 12, but were 5 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 301, 328, and 287 in the preceding three weeks, rose again last week to 292, but were

53 below the corrected average.

The deaths attributed directly to influenza numbered 12, having been 16, 9, and

14 in the preceding three weeks.

Different forms of violence caused 76 deaths, concerning all but one of which inquests were held. Of these 76 deaths, 13 were cases of suicide, while the remaining 63 were attributed to accident or negligence. Ten of these were referred to vehicles in the streets, 6 to drowning, 2 to the effects of anæsthetics administered for surgical purposes, and 15 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 13 cases of small-pox, 2523 of scarlet fever, 714 of diphtheria, and 75 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 3 cases, against 5, 4, and 8; of scarlet fever, 236 cases, against 226, 201, and 236; of diphtheria, 97 cases, against 78, 90, and 99; and of enteric fever, 12 cases, against 8, 16, and 12.

GREATER LONDON.

In Greater London 3490 births and 1949 deaths were registered, corresponding to annual rates of 29.6 and 16.5 per 1000 of the estimated population. In the Outer Ring, one death from small-pox, 33 from measles, 5 from scarlet fever, 8 from diphtheria, 30 from whooping-cough, 4 from "fever," and 3 from diarrhoea were registered. The fatal case of small-pox belonged to West Ham; five deaths from measles occurred in Croydon sub-district, and 4 in Bexley sub-district; 5 deaths from diphtheria, 10 from whooping-cough, and 3 from "fever" occurred in West Ham district; 4 deaths from whooping-cough occurred in Croydon sub-district, and 4 in Chiswick sub-district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.85 inches, and that of the Thermometer 50°.6, the latter being 1°.7 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 26 per cent. above the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 22.1 hours. The measured rainfall amounted to 0.02 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fover respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

The numbers in this column are the average weekly Deaths for the ten years 1826-25, raised by 5°541 per cent for increase of population. These cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical men. When nedical attendant does not certify that the deceased has, or has not, been vaccinated, or when the cause of death is not certified by a registered titioner, the case is returned under the heading "no statement."

The originace, at inquest is often maufficient to enable the Coroner to certify whether a violent death be the result of socident, murder, slaughfor, or suicide. All such cases are classed under "accident."

LONDON DEATHS IN AND BIRTHS

OTHER QREAT TOWNS. THIRTY-TWO

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 19. 1896. Vol. LVII.]

WEEK ENDING SATURDAY, MAY 9.

Price $1\frac{1}{2}d$.

General Register Office, Somerset House, May 11th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.5 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

		Weeks	ending	100			Weeks	ending

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.2 in West Ham, in Plymouth, and in Sheffeld, 1.3 in Croydon, 1.5 in Salford and in Oldham, 1.6 in London, 1.8 in Bristol and in Manchester, 2.0 in Burnley, 2.2 in Sunderland, and 2.9 in Birkenhead; from scarlet fever, 1·0 in Huddersfield; from whooping-cough, 1·0 in Cardiff and in Derby, 1·1 in London, 1·2 in Wolverhampton, 1·4 in Birmingham, 1·5 in Newcastle-on-Tyne, 1·7 in Halifax, 1·8 in West Ham and in Croydon, 1·9 in Manchester, and 2·2 in Salford; from "fever," 1·1 in Halifax: and from diarrhæa, 1·0 in Norwich and in Salford. The 74 deaths from diphtheria included 41 in London, 6 in West Ham, 6 in Birmingham, 5 in Manchester, and 3 in Burnley. No death from small-pox was registered in any of the thirty-three towns.

In the registration district of Gloucester 25 deaths from small-pox were registered last week, 24 of the deceased persons having been residents of Gloucester

municipal borough.

LONDON.

In London† 2690 BIRTHS and 1523 DEATHS were registered. Allowing for increase of population, the births were one above, and the deaths 77 below, the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

† Inc uding deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as Practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 19·4, 19·3, and 18·5 in the preceding three weeks, further fell last week to 17·9. During the four weeks ending on Saturday last the death-rate averaged 18·8 per 1000, being 0·5 per 1000 below the mean rate in the corresponding periods of the ten years 1886–95.

The 1523 deaths included 137 from measles, 11 from searlet fever, 41 from

The 1523 deaths included 137 from measles, 11 from scarlet fever, 41 from diphtheria, 96 from whooping-cough, 4 from enteric fever, 10 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 299 deaths were referred to these

diseases, being 96 above the corrected average weekly number.

The deaths from measles, which had been 145, 170, and 152 in the preceding three weeks, further fell last week to 137, but were 67 above the corrected average; 19 cases belonged to Kensington, 13 to Battersea, 10 to Wandsworth, 8 to Greenwich, and 8 to Woolwich sanitary areas. The deaths from scarlet fever, which had been 11, 13, and 10 in the preceding three weeks, were 11 last week, the corrected average being 15; 2 cases belonged to St. Pancras and 2 to Plumstead sanitary areas. The deaths from diphtheria, which had been 42, 41, and 36 in the preceding three weeks, rose again last week to 41, exceeding the corrected average by 10; 9 cases belonged to Islington, 3 to Hammersmith, and 3 to Lambeth sanitary areas. The deaths from whooping-cough, which had been 117, 134, and 114 in the preceding three weeks, further fell last week to 96, but were 34 above the corrected average; 9 cases belonged to Camberwell, 8 to Islington, 7 to Bethnal Green, and 7 to Greenwich sanitary areas. The fatal cases of enteric fever, which had been 6, 6, and 10 in the preceding three weeks, fell again last week to 4, and were 3 below the corrected average. The deaths from diarrhæa, which had been 16, 3, and 12 in the preceding three weeks, fell again last week to 10, and were 5 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 328, 287, and 292 in the preceding three weeks, fell again last week to 260, and were

68 below the corrected average.

The deaths attributed directly to influenza numbered 13, having been 9, 14, and

12 in the preceding three weeks.

Different forms of violence caused 51 deaths, concerning all but 4 of which inquests were held. Of these 51 deaths, 11 were cases of suicide, while the remaining 40 were attributed to accident or negligence. Eight of these were referred to vehicles in the streets, 3 to drowning, and 3 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 15 cases of small-pox, 2527 of scarlet fever, 707 of diphtheria, and 76 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of small-pox, 5 cases, against 4, 8, and 3; of scarlet fever, 238 cases, against 201, 236, and 236; of diphtheria, 101 cases, against 90, 99, and 97; and of enteric fever, 9 cases, against 16, 12, and 12.

GREATER LONDON.

In Greater London 3671 births and 1948 deaths were registered, corresponding to annual rates of 31·1 and 16·5 per 1000 of the estimated population. In the Outer Ring, 31 deaths from measles, 4 from scarlet fever, 14 from diphtheria, 40 from whooping-cough, 5 from "fever," and one from diarrhea were registered. Ten deaths from measles occurred in Willesden sub-district, and 4 in Bexley sub-district; 9 deaths from diphtheria and 15 from whooping-cough occurred in West Ham district; 4 deaths from whooping-cough occurred in Croydon, 4 in Willesden, and 4 in Hornsey sub-districts.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30·12 inches, and that of the Thermometer 52°·3, the latter being 1°·8 above the week's average in the 50 years 1841–90. The direction of the wind was North-Easterly, the horizontal movement of the air being 8 per cent, above the week's average in the 16 years 1860–75. The duration of registered bright sunshine in the week was 46·1 hours. No rain was measured during the week.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

No. 20. 1896. Vol. LVII.]

WEEK ENDING SATURDAY, MAY 16.

Price 11d.

General Register Office, Somerset House, May 18th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.4 per 1000 of their aggregate population, which is estimated* at 10,860,971 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

	Weeks er	nding		Weeks	ending
Towns.	Apr. May 1 25. 2.	May May 9. 16.	Towns.	Apr. May 25. 2.	May May 16.

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1·0 in Norwich, 1·1 in Gateshead, 1·3 in London, 1·5 in Salford, 1·6 in Bristol, 1·8 in Portsmouth, 2·1 in Manchester, 2·2 in Sunderland, and 2·9 in Birkenhead and in Oldham; from whooping-cough, 1·0 in London, in Cardiff, and in Salford, 1·3 in Croydon and in Manchester, 1·4 in West Ham, 1·6 in Huddersfield, 1·7 in Halifax, 2·0 in Birmingham, and 3·2 in Swansea; and from "fever," 1·0 in Birkenhead. In no case did the death-rate from scarlet fever or from diarrhæa reach 1·0 per 1000 in any of the thirty-three towns. The 72 deaths from diphtheria included 43 in London, 5 in West Ham, 4 in Liverpool, 3 in Cardiff, and 3 in Birmingham. One death from small-pox was registered in Cardiff, but not one in any other of the thirty-three towns.

In the registration district of Gloucester 18 deaths from small-pox were registered last week, 17 of the deceased persons having been residents of Gloucester

municipal borough.

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase between 1881 and 1891 had been maintained since the latter date.

A 91700.-7. 650.-5/96. Wt. 124.

In London* 2462 BIRTHS and 1516 DEATHS were registered. Allowing for increase of population, the births were 156, and the deaths 94, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 19.3, 18.5, and 17.9 in the preceding three weeks, further fell last week to 17.8. During the four weeks ending on Saturday last the death-rate averaged 18.4 per 1000, being 0.7 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1516 deaths included 111 from measles, 16 from scarlet fever, 43 from

diphtheria, 83 from whooping-cough, 8 from enteric fever, 11 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 272 deaths were referred to these

diseases, being 70 above the corrected average weekly number.

The deaths from measles, which had been 170, 152, and 137 in the preceding three weeks, further fell last week to 111, but were 36 above the corrected average: 11 cases belonged to Battersea. 9 to Wandsworth, 7 to Chelsea, 6 to Kensington, 6 to Islington, and 6 to Woolwich sanitary areas. The deaths from scarlet fever, which had been 13, 10, and 11 in the preceding three weeks, rose last week to 16, exceeding the corrected average by 2; 2 cases belonged to Bethnal Green, 2 to Newington, and 2 to Greenwich sanitary areas. The deaths from diphtheria, which had been 41, 36, and 41 in the preceding three weeks, further rose last week to 43, and were 11 above the corrected average; 6 cases belonged to Islington, 4 to Battersea, 3 to Paddington, 3 to St. Pancras, 3 to Bethnal Green, and 3 to Poplar sanitary areas. The deaths from whooping-cough, which had been 134, 114, and 96 in the preceding three weeks, further fell last week to 83, but were 28 above the corrected average; 9 cases belonged to Islington, 9 to Battersea, 7 to Poplar, 6 to Hackney, and 6 to Wandsworth sanitary areas. The fatal cases of enteric fever, which had been 6, 10, and 4 in the preceding three weeks, rose again last week to 8, which is also the corrected average. The deaths from diarrhea, which had been 3, 12, and 10 in the preceding three weeks, were 11 last week, the corrected average being 15.

The deaths referred to diseases of the respiratory organs, which had been 287, 292, and 260 in the preceding three weeks, further fell last week to 249, and were

74 below the corrected average.

The deaths attributed directly to influenza numbered 11, having been 14, 12, and

13 in the preceding three weeks.

Different forms of violence caused 68 deaths, concerning all but 2 of which inquests were held. Of these 68 deaths, 5 were cases of suicide, and 2 of homicide, while the remaining 61 were attributed to accident or negligence. Four of these were referred to vehicles in the streets, 6 to drowning, and 13 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.†

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 20 cases of small-pox, 2539 of scarlet fever, 710 of diphtheria, and 81 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow: -Of small-pox, 6 cases, against 8, 3, and 5; of scarlet fever, 293 cases, against 236, 236, and 238; of diphtheria, 104 cases, against 99, 97, and 101; and of enteric fever, 20 cases, against 12, 12, and 9.

^{*} Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside kegistration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

† The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

GREATER LONDON.

In Greater London 3387 births and 1922 deaths were registered, corresponding to annual rates of 28.7 and 16.3 per 1000 of the estimated population. In the Outer Ring, 29 deaths from measles, 2 from scarlet fever, 12 from diphtheria, 29 from whooping-cough, 4 from "fever," and 5 from diarrhea were registered. Seven deaths from measles occurred in Edmonton district, 5 in West Ham district, and 5 in Croydon district; the 2 deaths from scarlet fever occurred in Edmonton district; 8 deaths from diphtheria, 10 from whooping-cough, and 3 from "fever" occurred in West Ham district; and 4 deaths from whooping-cough occurred in Willesden sub-district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 30.07 inches, and that of the Thermometer 58°.5, the latter being 6°.2 above the week's average in the 50 years 1841-90. The direction of the wind was North-Easterly, the horizontal movement of the air being 10 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 57.9 hours. No rain was measured during the week.

RETURNS OF LONDON WATER COMPANIES.

The London Water Companies have been good enough to furnish the following account of the number of services and the average daily amount of water supplied during the month of April 1896. The supply was in the ratio of 237 gallons to one service.

COMPANIES.	Number	of Services.	Daily Suppl in Ga	
	APRIL. 1895.	APRIL. 1896.	APRIL. 1895.	APRIL. 1896.
TOTAL SUPPLY	814,476	828,533	228,020,760	196,567,394

Note.—The Return for April 1896, as compared with that for the corresponding month of 1895, shows an increase of 14,067 services and a decrease of 31,453,366 gallons of water supplied daily.

Analysis of Metropolitan Water Supply during April, 1896.

Water-analysis Laboratory, The Yews, Reigate, 11th May, 1896.

I HAVE to report to you the results of the chemical analysis, and of the physical and bacterioscopic examination, of the waters supplied to the inner, and portions of the outer, circle of the Metropolis during the month of April.

At the request of the Associated Metropolitan Water Companies, I have extended these monthly examinations to (a) the chemical and bacterioscopic condition of the raw river water at the intakes of the various Companies, and (b) to the bacteriology of the water as it issues from the filter beds of each Company, and before it is pumped into the distributing mains.

I append, also, the results obtained in the analyses of the waters supplied to Birmingham and Glasgow by their respective Corporations. These analyses were made by Dr. Hill of Birmingham and Dr. Mills of Glasgow.

Analysed by Dr. Alfred Hill, F.I.C., Medical Officer of Health and Analyst to the City.
 Analysed by Dr. E. J. Mills, F.R.S., of the Glasgow and West of Scotland Technical College.

All the numbers in columns 4, 5. 6, 7, 8, 9, 10, and 11, relate to 100,000 parts of the waters. The Table is to be read thus:—the Grand Junction Company's intake at Hampton, collected on the 18th of April 1896, had a temperature of 11° 4 C.; 100,000 lbs. of it contained 28 32 lbs. of solid matter; the organic substances, constituting a portion of this matter, contained 226 lb. of carbon and 049 lb. of nitrogen. The above quantity of water also contained 012 lb. of ammonia and 197 lb. of nitrogen in the form of nitrates and nitrites, whilst the total amount of combined nitrogen in every form was 256 lb. The above weight of water also contained 1.8 lb. of chlorine and 20.9 lbs. of carbonate of lime, or an equivalent quantity of other hardening or soap-destroying ingredients.

The numbers in the analytical Table can be converted into grains per imperial gallon by multiplying them by 7, and then moving the decimal point one place to the left. The same operation transforms the hardness in the Table into degrees of hardness on Clark's scale.

Taking the average amount of organic impurity in a given volume of the Kent Company's water during nine years ending December 1876 as unity, the proportional amount contained in an equal volume of water supplied by each of the Metropolitan Water Companies and by the Tottenham Local Board of Health, was:—Kent 0.8, Tottenham 1.3, New River 1.8, East London (deep-well) 2.1, West Middlesex, Grand Junction, and East London (river supply) 2.4, Southwark 2.6, Colne Valley 2.7, Lambeth 2.9, and Chelsea 3.1. The unfiltered river waters contained the following proportions:—Thames at Hampton 4.7, New River Cut 2.5, and the Lea at Angel Road 4.0.

The Thames at Hampton was, on April 18th, turbid and pale yellow in colour. It was of good chemical, but inferior bacterial quality; but, by 6 days storage, the West Middlesex Company were enabled to supply their filters with water containing only one-tenth of the number of microbes present in the unstored river water. As delivered by the five Companies drawing from this river the water was, in every case, efficiently filtered, and, with one exception, of most excellent bacterial quality. The bacterial improvement effected by the various Companies is expressed by the following per-centage numbers:—Chelsea 99.95, West Middlesex 99.73, Southwark (No. 4 filter) 99.89, Grand Junction (general well at Hampton) 99.1, (general well at Kew) 96.54, (South filter well at Kew) 99.89, and Lambeth 99.84.

The New River Cut, before entering the subsidence and storage reservoirs, was, on April 21st, turbid and very pale yellow in colour. It was of most excellent chemical, and fairly good bacterial quality. By passing through two storage reservoirs, the number of bacteria per c.c. was reduced to nearly one-third of the original amount, and, after efficient filtration, the water was delivered in most excellent chemical and bacterial condition, excelling some of the deep-well waters in organic purity and more than rivalling the whole of the remaining Metropolitan waters in bacterial purity; indeed, filter No. 8 of this Company was, at the time my sample was taken, delivering absolutely sterile water. The bacterial improvement effected by the other filters was 99.7 per cent. The excellent bacterial quality of the Chelsea Company's supply also deserves a special mention, as this water contained only 4 microbes per c.c. whilst the raw Thames water on the same date contained 7520. The water, taken from the Lea at Angel Road by the East London Company on the 31st of April, was turbid and pale yellow in colour. It was of good chemical quality and somewhat better than the Thames at Hampton. The cultivations for bacteria of this and the stored water were unfortunately lost by an accident.

The deep-well waters of the Kent Company and of the Tottenham Local Board of Health were of most excellent chemical quality, although the Tottenham water was very slightly turbid The Colne Valley and East London (deep well) waters contained, for deep well waters, more organic matter than usual. The Colne Valley Company's water was softened before delivery and thus rendered suitable for washing.

Seen through a stratum two feet deep, the Kent and Colne Valley waters were clear and colourless, and the Tottenham and East London (deep well) waters very slightly turbid and colourless, the New River clear and nearly colourless, and the remaining waters clear and very pale yellow.

The bacterioscopic examination of the raw river waters before and after storage, and of the supplies delivered by the various Companies and collected on the 18th, 20th, and 21st of April yielded the results contained in the following table:—

Description.	Microbes per c.c.	Temp. C.
RAW AND STORED RIVER WATERS. Thames at Hampton, April 18th West Middlesex Company's water passing on to filters 1-5, April 20th Grand Junction Company's water arriving at Kew from Hampton, April 20th " " at Kew passing on to filters 2-6, April 20th Lambeth Company's water passing to filter No. 5, April 18th New River Cut before passing through reservoirs, April 20th " after passing through reservoirs, before filtration, April 20th FILTERED RIVER WATERS AS SUPPLIED.	7,520 720 1,240 980 5,340 1,340 500	11.4 11.0 11.6 11.6 10.7 11.8 11.7
THAMES. Chelsea Company's general filter well, April 18th West Middlesex Company's general filter well, April 20th Southwark Company's No. 4 filter well, April 18th Grand Junction Company's general filter well at Hampton, April 18th """ south Lambeth Company's general filter well, April 18th LEA. New River Company's general filter well, April 21st "No. 4" April 21st "No. 4" April 21st "No. 8", April 21st "No. 8", April 21st "No. 1 Essex well, April 21st "" Middlesex well, April 21st """ Middlesex well, April 21st	4 20 8 68 260 8 12 4 4 4 0 52 52	10'4 11'4 10'5 11'3 11'6 11'6 10'4 11'2 11'4 10'7 11'4 11'1

Dr. Hill, F.I.C., Medical Officer of Health for Birmingham, reports that the water supplied to that city was "almost clear and pale green in a two-foot tube."

Dr. Mills, F.R.S., of the Glasgow and West of Scotland Technical College, reports that the water supplied to that city from Loch Katrine was "light brown in colour, and contained a " little suspended matter,"

The Registrar General, &c. &c.

I am, &c. E. Frankland.

WEEKLY RETURN

LONDON AND DEATHS IN BIRTHS

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, HAST HARDING ST., FETTER LANE, E.C.

No. 21. 1896. Vol. LVII.

WEEK ENDING SATURDAY, MAY 23.

[Price $1\frac{1}{2}d$.

General Register Office, Somerset House, May 26th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 18.1 per 1000 of their aggregate population, which is estimated* at 10,846,508 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

		Weeks	ending	/			Weeks	ending

Leicester -	12.1	14.4	14.4	12.6					

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Leicester, in Manchester, and in Salford, 1.1 in Gateshead, 1.4 in London and in Norwich, 1.7 in Hull, 1.9 in Birkenhead, 2.6 in Sunderland, 3.2 in Portsmouth, and 4.0 in Oldham; from whooping-cough, 1.0 in Birmingham and in Burnley, 1.1 in London, in Oldham, and in Sheffield, 1.2 in West Ham, 1.3 in Cardiff, 1.5 in Newcastle-on-Tyne, 2.2 in Salford, 2.3 in Preston, and 3.0 in Sunderland; and from diarrhea, 1.2 in Salford. In no case did the death-rate from scarlet fever or from "fever" reach 1:0 per 1000 in any of the thirty-three towns. The 83 deaths from diphtheria included 56 in London, 7 in West Ham, 5 in Birmingham, and 3 in Leicester. One death from small-pox was régistered in Bristol, but not one in any other of the thirty-three towns.

In the registration district of Gloucester 18 deaths from small-pox were registered last week, 17 of the deceased persons having been residents of Gloucester

municipal borough.

LONDON.

The population of registration London at the recent census enumeration was 4,411,271; the populations of the several sub-districts are shown in Table 5. The population of London in the middle of this year, estimated on the basis of the rate of increase between the censuses of 1891 and 1896 is 4,421,492, which is 14,463 less

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase in the last intercensal period had since been maintained.

A 91700.—8, 650.—5/96, Wt. 124.

than the estimate hitherto in use, based on the enumerations of 1881 and 1891.

The revised estimate will be used in this and in future weekly returns.

In London* 2421 BIRTHS and 1509 DEATHS were registered. Allowing for increase of population, the births were 176, and the deaths 72, below the average numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 18.5, 18.0, and 17.9 in the preceding three weeks, further fell last week to 17.8. During the four weeks ending on Saturday last the death-rate averaged 18.1 per 1000, being 0.8 per 1000 below

the mean rate in the corresponding periods of the ten years 1886-95.

The 1509 deaths included 119 from measles, 12 from scarlet fever, 56 from diphtheria, 94 from whooping-cough, 4 from enteric fever, 14 from diarrhea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 299 deaths were referred to these

diseases, being 91 above the corrected average weekly number.

The deaths from measles, which had been 152, 137, and 111 in the preceding three weeks, rose again last week to 119, and were 45 above the corrected average; 15 cases belonged to Battersea, 12 to Wandsworth, 10 to Paddington, and 9 to Plumstead sanitary areas. The deaths from scarlet fever, which had been 10, 11, and 16 in the preceding three weeks, fell again last week to 12, and were 6 below the corrected average. The deaths from diphtheria, which had been 36, 41, and 43 in the preceding three weeks, further rose last week to 56, and were 26 above the corrected average; 7 cases belonged to Camberwell, 6 to Islington, and 4 to Chelsea sanitary areas. The deaths from whooping-cough, which had been 114, 96, and 83 in the preceding three weeks, rose again last week to 94, and were 35 above the corrected average; 8 cases belonged to Hackney, 7 to Lambeth, and 7 to Battersea sanitary areas. The fatal cases of enteric fever, which had been 10, 4, and 8 in the preceding three weeks, fell again last week to 4, the corrected average being 8. The deaths from diarrhæa, which had been 12, 10, and 11 in the pre ceding three weeks, rose last week to 14, the corrected average being 15.

Different forms of violence caused 65 deaths, concerning all but 3 of which inquests were held. Of these 65 deaths, 13 were cases of suicide, while the remaining 52 were attributed to accident or negligence. Twelve of these were referred to vehicles in the streets, 4 to drowning, one to the effects of an anæsthetic administered for surgical purposes, and 9 (of infants under one year of age) to

suffocation in bed.

Cases of Infectious Sickness in Hospitals.†

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 22 cases of small-pox, 2596 of scarlet fever, 706 of diphtheria, and 80 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:-Of small-pox, 5 cases, against 3, 5, and 6; of scarlet fever, 305 cases, against 236, 238, and 293; of diphtheria, 99 cases, against 97, 101, and 104; and of enteric fever, 13 cases, against 12, 9, and 20.

GREATER LONDON.

In Greater London 3388 births and 1948 deaths were registered, corresponding to annual rates of 28.6 and 16.4 per 1000 of the estimated population. Outer Ring, 35 deaths from measles, 13 from diphtheria, 27 from whooping-cough, and 5 from "fever" were registered. Seven deaths from measles occurred in Acton sub-district, and 4 in Willesden sub-district; 4 from diphtheria in Plaistow subdistrict, and 3 in Forest Gate sub-district; 7 from whooping-cough in Acton sub-district; and 3 from "fever" in Canning Town sub-district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.89 inches, and that of the Thermometer 55°·5, the latter being 1°·2 above the week's average in the 50 years 1841–90. The direction of the wind was variable, the horizontal movement of the air being 6 per cent. below the week's average in the 16 years 1860–75. The duration of registered bright sunshine in the week was 15·4 hours. The measured rainfall amounted to 0·25 of an inch.

^{*} Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, † The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

WEEKLY RETURN

BIRTHS AND DEATHS IN LONDON

AND IN

THIRTY-TWO OTHER QREAT TOWNS.

By Authority of the Registrar General.

Printed under the Superintendence of Her Majesty's Stationery Office, AND SOLD BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.O.

No. 22. 1896. Vol. LVII.

WEEK ENDING SATURDAY, MAY 30.

Price 11d.

General Register Office, Somerset House, June 1st, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in Thirty-Three Great Towns of England and Wales corresponded to an annual rate of 17.6 per 1000 of their aggregate population, which is estimated* at 10,846,948 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:—

Leicester -	14.4	14.4	12.6	12.3					

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in Norwich, 1.1 in Gateshead, 1.2 in London and in West Ham, 1.4 in Birkenhead, 1.6 in Huddersfield, 1.8 in Croydon, 1.9 in Manchester and in Sunderland, 2.4 in Hull, and 2.9 in Oldham; from scarlet fever, 1.1 in Bristol and 1.2 in Salford; from whooping-cough, 1.0 in London, 1.1 in Birmingham, in Oldham, and in Gateshead, 1.3 in Croydon, in Cardiff, and in Bolton, 1.4 in West Ham and in Preston, and 1.5 in Salford; and from diarrhea, 1.2 in Salford, 1.4 in Hull, and 1.7 in Plymouth. In no case did the death-rate from "fever" reach 1:0 per 1000 in any of the thirty-three towns. The 67 deaths from diphtheria included 40 in London, 4 in West Ham, 4 in Birmingham, and 4 in Liverpool. No death from small-pox was registered in any of the thirtythree towns.

In the registration district of Gloucester 15 deaths from small-pox were registered last week, 14 of the deceased persons having been residents of Gloucester municipal borough.

LONDON. In LONDON 2326 BIRTHS and 1430 DEATHS were registered. Allowing for increase of population, the births were 247, and the deaths 80, below the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase in the last intercensal period had since been maintained.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgate Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 18.0, 17.9, and 17.8 in the preceding three weeks, further fell last week to 16.9. During the four weeks ending on Saturday last the death-rate averaged 17.7 per 1000, being 0.8 per 1000 below the mean rate in the corresponding periods of the ten years 1886–95.

The 1430 deaths included 98 from measles, 19 from scarlet fever, 40 from diphtheria, 83 from whooping-cough, 8 from enteric fever, 10 from diarrheea and dysentery, and not one death from small-pox, from typhus, from any ill-defined form of continued fever, or from cholera; thus, 258 deaths were referred to these

diseases, being 61 above the corrected average weekly number.

The deaths from measles, which had been 137, 111, and 120 in the preceding three weeks, declined again last week to 98, but were 26 above the corrected average; 7 cases belonged to Kensington, 7 to Battersea, 6 to Greenwich, 5 to Chelsea, 5 to Hackney, and 5 to Lewisham sanitary areas. The deaths from scarlet fever, which had been 11, 16, and 12 in the preceding three weeks, rose again last week to 19, and were 4 above the corrected average; 3 cases belonged to Lambeth, 3 to Wandsworth, and 2 to Islington sanitary areas. The deaths from diphtheria, which had been 41, 43, and 56 in the preceding three weeks, declined again last week to 40, but were 10 above the corrected average; 9 cases belonged to Isling. ton, 6 to Camberwell, 3 to Marylebone, and 3 to Poplar sanitary areas. The deaths from whooping-cough, which had been 96, 83, and 94 in the preceding three weeks, fell again last week to 83, but were 32 above the corrected average; 8 cases belonged to Wandsworth, 6 to Islington, 6 to Bethnal Green, and 6 to Battersea sanitary areas. The fatal cases of enteric fever, which had been 4, 8, and 4 in the preceding three weeks, rose again to 8 last week, which is also the corrected average. The deaths from diarrhea, which had been 10, 11, and 14 in the preceding three weeks, declined again to 10 last week, and were 7 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 260,

249, and 217 in the preceding three weeks, rose again last week to 230, but were

44 below the corrected average.

The deaths attributed directly to influenza numbered 6, having been 13, 11, and

7 in the preceding three weeks.

Different forms of violence caused 79 deaths, concerning all but 2 of which inquests were held. Of these 79 deaths, 10 were cases of suicide, while the remaining 69 were attributed to accident or negligence. Nine of these were referred to vehicles in the streets, 3 to a conflagration, 3 to the effects of anæsthetics administered for surgical purposes, and 24 (of infants under one year of age) to suffocation in bed.

Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 19 cases of small-pox, 2679 of scarlet fever, 704 of diphtheria, and 78 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow: Of small-pox, 3 cases, against 5, 6, and 5; of scarlet fever, 297 cases, against 238, 293, and 305; of diphtheria, 75 cases, against 101, 104, and 99; and of enteric fever, 13 cases, against 9, 20, and 13.

GREATER LONDON.

In Greater London 3101 births and 1842 deaths were registered, corresponding to annual rates of 26.2 and 15.5 per 1000 of the estimated population. In the Outer Ring, 34 deaths from measles, 4 from scarlet fever, 9 from diphtheria, 28 from whooping-cough, one from "fever," and 6 from diarrhea were registered. Six deaths from measles occurred in Tottenham, 5 in Croydon, and 4 in Willesden sub-districts; 3 deaths from diphtheria occurred in Plaistow sub-district; and 5 deaths from whooping-cough occurred in Willesden sub-district.

METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was '30.10 inches, and that of the Thermometer 55° 4, the latter being 0° 6 below the week's average in the 50 years 1841-90. The direction of the wind was North-Easterly, the horizontal movement of the air being 33 per cent. above the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 44.0 hours. No rain was measured during the week.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or; Enteric Fever respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

The numbers in this column are the average weekly Deams for the ten years 1886-95, raised by 5°541 per cent for increase of population. Those cases of small-pox only are returned as "vaccinated" or as "unvaccinated" which are so certified by registered medical meas. When medical attendant-does not certify that the decoased has, or has not, been vaccinated, or when the cause of death is not certified by a registered stitioner, the case is returned under the heading "no statement."
The evidence, at inquests is often insufficient to canable the Coroner to certify whether a violent death be the result of secident, murder, alaughter, or suicide. All such cases are classed under "accident."

Including deaths from croup.
 Including 218 deaths from cholera in Calcutta, 16 in Bombay, and 29 in Alexandria.

TABLE 9.-METEUROLOGICAL OBSERVATIONS taken at the ROTAL UBSERVATURY, GREENWICH, during the Week ending Saturday, 307H MAX, 1896. Under the Superintendence of the Astronomer Royal,

0.2 8.7 8.8 0.0 0.5 3.5 5.2 2.3 Observations are usually taken at 9h. A.M.; noon; 3h. P.M.; and 9h. P.M. The means of the eye-readings of the barometer, the dry bulb thermometer, and the wet bulb thermometer, are converted into mean daily values by the application of corrections deduced from a discussion of the photographic records mad during the twenty years ending 1873 for the barometer, and during the twenty years ending 1888 for the thermometers. With the corrected mean reading and minimum thermometers, forming the mean daily value of temperature of the air (column 8). The mean daily dew point temperature and degree of humidity are deduced The average temperature of the air is that derived from a discussion of the observations made at Greenwich during the 50 years ending 1890, and that of horizontal movement of the air from a discussion of the anemometric records for the 16 years ending 1875. In reading the columns 9 and 24 it will be borne in mind that + indicates "higher," and "tower," than the average. The record of Electrony is derived from Thomson's self-registering Electrometer. The symbols employed are :- P. positive; N. negative; w. weak; m. moderate; s. strong; and Ozone The height of the cistern of the barometer is 159 feet above the mean level of the sea; no The numbers in column 28, derived from the Campbell-Stokes Sunshine Instrument, show of the dry bulb thermometer is combined the corrected mean of the readings of the maximum bulb thermometers by Glaisher's Hygro-The values given in column 17 are not corrected for the index error of the thermometer, 26 in a Gauge Whose receiving surface is 5 inches in. 0.00 00.0 00.0 00.0 00.0 00.0 00.0 Sum 00.0 252 Depar. of 16 Years. No. 23. 1896. Vol. LVII.

WEEK ENDING SATURDAY, JUNE 6.

Price 1 d.

General Register Office, Somerset House, June 8th, 1896.

THIRTY-THREE GREAT TOWNS.

The deaths registered last week in THIRTY-THREE GREAT TOWNS of England and Wales corresponded to an annual rate of 17.8 per 1000 of their aggregate population, which is estimated* at 10,846,948 persons in the middle of this year. The deaths registered in each of the last four weeks in the several towns, alphabetically arranged, corresponded to the following annual rates per 1000:-

The highest annual death-rates per 1000 living, as measured by last week's mortality, were:—from measles, 1.0 in West Ham and in Birkenhead, 1.1 in Bristol and in Nottingham, 1.4 in London and in Manchester, 1.8 in Portsmouth and in Oldham, and 2.6 in Gateshead; from whooping-cough, 1.0 in London, 1.1 in Gateshead, 1.2 in West Ham, in Manchester, and in Hull, 1.6 in Birmingham and in Huddersfield, 1.8 in Wolverhampton, 1.9 in Cardiff, and 2.2 in Salford; from "fever," 1.1 in Gateshead; and from diarrhæa, 1.0 in Burnley. In no case did the death-rate from scarlet fever reach 1.0 per 1000 in any of the thirty-three towns. The 72 deaths from distributed 50 in London. 6 in Birmingham towns. The 73 deaths from diphtheria included 52 in London, 6 in Birmingham, and 3 in Liverpool. No death from small-pox was registered in any of the thirty-

In the registration district of Gloucester 11 deaths from small-pox were registered last week, all the deceased persons having been residents of Gloucester municipal borough.

LONDON.

In London't 2545 BIRTHS and 1469 DEATHS were registered. Allowing for increase of population, the births were 88, and the deaths 15, below the average

^{*} By "estimated" population is merely meant the number of persons who would be living if the mean rate of increase in the last intercensal period had since been maintained.
† Including deaths of Londoners in the Metropolitan Workhouses, Hospitals, and Lunatic Asylums situated outside Registration London, but excluding deaths of persons not belonging to London occurring in the Highgane Small-pox Hospital, in the London Fever Hospital, in the Middlesex County Lunatic Asylum at Wandsworth, and in the Metropolitan Asylums Board Hospitals within Registration London. As far as practicable, the deaths thus excluded from Registration London are, for the purposes of Tables 1, 6, and 7, added to the Outer Ring, or to other areas to which they belong.

numbers in the corresponding weeks of the last ten years. The annual death-rate per 1000 from all causes, which had been 17.9, 17.8, and 16.9 in the preceding three weeks, rose again last week to 17.3. During the four weeks ending on Saturday last the death-rate averaged 17.5 per 1000, being 0.7 per 1000 below the mean rate in the corresponding periods of the ten years 1886-95.

The 1469 deaths included 115 from measles, 13 from scarlet fever, 52 from diphtheria, 86 from whooping-cough, 7 from enteric fever, 17 from diarrhea and dysentery, one from choleraic diarrhea, and not one death from small-pox, from typhus, or from any ill-defined form of continued fever; thus, 291 deaths were referred to these diseases, being 93 above the corrected average weekly number.

The deaths from measles, which had been 111, 120, and 98 in the preceding three weeks, rose again to 115 last week, and were 39 above the corrected average; 15 cases belonged to Battersea, 10 to Paddington, 7 to Kensington, 6 to Fulham, and 6 to Bethnal Green sanitary areas. The deaths from scarlet fever, which had been 16, 12, and 19 in the preceding three weeks, declined to 13 last week, and were 5 below the corrected average; 2 cases belonged to Fulham, 2 to St. Paneras, and 2 to Poplar sanitary areas. The deaths from diphtheria, which had been 43, 56, and 40 in the preceding three weeks, rose again last week to 52, and were 25 above the corrected average; 8 cases belonged to Camberwell, 5 to Islington, and 3 to Paddington sanitary areas. The deaths from whooping-cough, which had been 83, 94, and 83 in the preceding three weeks, were 86 last week, and were nearly double the corrected average; 10 cases belonged to Islington, 8 to Greenwich, 5 to Hackney, 5 to Bethnal Green, 5 to Lambeth, and 5 to Battersea sanitary areas. The fatal cases of enteric fever, which had been 8, 4, and 8 in the preceding three weeks, were 7 last week, which is also the corrected average; 2 cases belonged to Hackney sanitary area. The deaths from diarrhæa, which had been 11, 14, and 10 in the preceding three weeks, rose again to 17 last week, but were 5 below the corrected average.

The deaths referred to diseases of the respiratory organs, which had been 249, 217, and 230 in the preceding three weeks, declined again last week to 213, and

were 39 below the corrected average.

The deaths attributed directly to influenza numbered 12, having been 11, 7, and

6 in the preceding three weeks.

Different forms of violence caused 60 deaths, concerning all but 5 of which inquests were held. Of these 60 deaths, 8 were cases of suicide, and 2 of homicide, while the remaining 50 were attributed to accident or negligence. Four of these were referred to vehicles in the streets, 6 to drowning, one to the effects of chloroform administered for surgical purposes, and 11 (of infants under one year of age) to suffocation in bed.

# Cases of Infectious Sickness in Hospitals.*

According to returns from the Metropolitan Asylum and London Fever Hospitals, and from the Highgate Small-pox Hospital, there were 25 cases of small-pox, 2717 of scarlet fever, 729 of diphtheria, and 76 of enteric fever under treatment in these hospitals on Saturday last (Table 3). The admissions during the week, as compared with those in the preceding three weeks, were as follow:—Of; small-pox, 8 cases, against 6, 5, and 3; of scarlet fever, 318 cases, against 293, 305, and 297; of diphtheria, 132 cases, against 104, 99, and 75; and of enteric fever, 12 cases, against 20, 13, and 13.

### GREATER LONDON.

In Greater London 3472 births and 1874 deaths were registered, corresponding to annual rates of 29·3 and 15·8 per 1000 of the estimated population. In the Outer Ring, 32 deaths from measles, 3 from scarlet fever, 7 from diphtheria, 24 from whooping-cough, 4 from "fever," and 3 from diarrhoea were registered. Five deaths from measles occurred in Acton sub-district and 4 in Willesden sub-district; 4 deaths from whooping-cough occurred in Hornsey, 3 in Chiswick, and 3 in Tottenham sub-districts.

### METEOROLOGY.

The mean reading of the Barometer last week at Greenwich was 29.68 inches, and that of the Thermometer 63°.3, the latter being 5°.5 above the week's average in the 50 years 1841-90. The direction of the wind was variable, the horizontal movement of the air being 32 per cent. below the week's average in the 16 years 1860-75. The duration of registered bright sunshine in the week was 61.9 hours. The measured rainfall amounted to 0.19 of an inch.

^{*} The figures for the Hospitals represent patients certified on admission to be suffering from Small-pox, Scarlet Fever, Diphtheria, or; Enteric Fover respectively; but in a considerable proportion of cases the diagnosis is found, after sojourn in the Hospital, to have been erroneous.

|           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
